

DACH page: complex Shopify integrations, with Alexander Karl

One new page for German-speaking merchants whose Shopify store has to talk to an ERP, a POS and custom systems. English first; it is the first page we will also publish in German (Alexander translates). Built now in the current site style as part of the quick EN release; Ira's design is the reference for the later redesign.

WORKING URL /pages/shopify-erp-integration-dach DE: /de/pages/...	AUDIENCE DACH merchants, complex stack ERP / POS / custom API	GOAL Qualified enquiry via our contact form	STATUS Structure for review copy not written yet
--	--	--	---

What the page has to do

Positioning

- Show technical depth through detail, not loud claims: calm, black-and-white, lots of air. Reference: **sdg.la/shopify-integrations**.
- Focus: complex integrations: ERP, custom API, inventory sync, POS.
- One to three strong case blocks instead of ten small ones.
- Give a German-speaking buyer a person in the region. Our site has no other human presence today.

How Alexander appears

- Our partner and contact for the DACH region: photo, name, role, one first-person quote. Format reference: **what.digital/de/shopify-erp-integrationen**.
- **No direct email, phone or calendar of his.** Every CTA goes to our contact form; we handle the enquiry and bring Alexander into the call when needed.
- **No logos of his clients** (Jungheinrich, EnBW, ...). Those are his projects, not ours.

Section order and what each needs

Budgets follow Ira's service-page slot map where the section is the same type; new sections have proposed budgets. **Orange = needs input from Marko / Alexander.**

Hero Eyebrow (≤ 19 chars) · H1, 3 lines × ≤ 23 chars, primary keyword · lead, 3 lines × ≤ 56 chars · CTA "Book a call" → contact form. Needs: H1 + lead. Primary keyword to confirm (see SEO below).	01 · existing section
Alexander Karl: your contact in the region Photo (placeholder until Alexander sends a good one) · name · role (e.g. "Partner, DACH") · one first-person quote, ≤ 200 chars · one line: "Talk to us in German or English" (to be confirmed). Needs: role wording, the quote (Alexander, EN + DE), his approval of both.	02 · new block
Capabilities: 6 cards Label · H2, 2 lines × ≤ 31 chars · six H3 titles ≤ 23 chars · six descriptions ≈ 70–90 chars. Needs: the six topics. Suggested starting set for Marko to accept or replace: ERP integration (Xentral) · Shopify POS · Custom middleware · Custom APIs · Inventory & order sync · Monitoring & support.	03 · existing section

Architecture: how the data flows

04 · new block

Built as SVG with real text labels, so it is readable for screen readers, search engines and AI assistants.

Needs: confirm the boxes and which data moves in which direction (orders, stock, prices, customers).

What an integration really includes

05 · new block

A short list that shows depth: retries, reconciliation, monitoring and alerts, error queues, idempotent order sync, logging, runbook / handover. One line each.

Needs: final list, only what we really deliver.

Case: 1 to 3 blocks

06 · existing section

Client (or anonymised description) · problem · what we connected · result. Our work only.

Needs: which project(s). Candidates from the current page list: Prime EVA, UK gifting brand, Nova Poshta Connect. Is any of them an ERP/POS case, or anonymised?

Process: 4 steps

07 · existing section

e.g. Audit & data mapping → Architecture & plan → Build & test → Launch & monitoring. Title + one line each.

Needs: confirm the steps and wording.

When we can help

08 · existing section

H2, 2 lines × ≤ 31 chars · three short conditions, 2 lines × ≤ 21 chars. They qualify the enquiry.

Needs: the three conditions.

FAQ

09 · existing section

6–8 questions. Marked up as FAQPage structured data (Google + AI assistants).

Needs: questions and answers (German market angles: GoBD / DATEV exports, hosting in the EU, German-language support, timelines).

Closing CTA

10 · existing section

"Book a call" → our contact form (placeholder until we decide whose calendar goes there).

Systems we name

Only what we have delivered: Shopify POS · Xentral · custom middleware / API. No long taxonomy of ERPs we have not worked with.

Relation to the Shopify Integrations page

/pages/service/custom-shopify-integrations stays the broad integrations page (Marko's copy: ERP, CRM, PIM, APIs, logistics, marketplaces). This page is narrower and regional: complex ERP + POS + middleware for DACH, with a person on the ground. The two link to each other. Titles, H1s and meta must differ, so they don't compete for the same query in Google.

SEO and AI readability (proposal: to confirm)

ITEM	PROPOSAL
Title (≤ 60)	Shopify ERP & POS Integration for DACH Base X Tech
Primary query	shopify erp integration (EN) · shopify erp integration / Shopify Xentral Anbindung (DE). Not checked against Search Console yet.
Structured data	Service (area served: DE, AT, CH) · FAQPage · BreadcrumbList · Person for Alexander (name, role, affiliation), only if he agrees
Languages	EN now. DE at /de/... with hreflang en ↔ de. All copy kept in one data file, so the German version is a text swap, not a rebuild.
AI assistants	All copy in plain HTML; page listed in llms.txt; diagram as text-based SVG.

What is placeholder in the first build

- Alexander's photo: neutral placeholder. The page does not go live with it.
 - "Book a call": opens our existing contact form.
 - No team photos anywhere on the site yet.
-

Questions for Marko

1. Is this section order right? Should "What an integration really includes" sit after the diagram (as drawn) or inside Capabilities?
2. The six capability topics: accept the suggested set or replace it?
3. Which case(s) can we show? Named or anonymised?
4. Alexander's role title and quote: who writes them, and who gets his sign-off?
5. URL: is **/pages/shopify-erp-integration-dach** fine, or do you prefer one without "dach" (region shown by language instead)?
6. Title and primary query: do you have Search Console / keyword data for DACH ERP queries?
7. Who writes the EN copy and when, so Alexander can start the German version?

Prepared from the brief sent to Ira on 24 Sep 2026 and the quick-site spec (docs/discovery/2026-09-24-quick-en-site.md, REQ-012... 019).
