

Marketing & brand review — summary (dev, 2026-09-24)

Three independent reviews of <https://dev.base-xtech.com>: [conversion](#) · [brand](#) · [buyer walkthrough, 4 personas](#).

Verdict

The new service copy is strong ($\approx 7/10$ as writing; FAQs are the best part; one clear position — *Shopify for stores where the build is the hard part*). Conversion overall $\approx 4.5/10$ because the **legacy layer** around the new copy contradicts it: old home copy, the \$2200 "for Ukraine" pricing card, the generic "Approach" block on every page, an English USD form with a pre-selected \$2k budget, anonymous proof and no answer to "who are you, where are you, who does the work". Roughly 70% of the fix is copy/structure — no redesign needed.

Persona outcome: Katrin (DE, Xentral) — no · Tom (UK, configurator) — maybe ~40% · Marta (EU, Magento) — likely ~60% · Lukas (CH, white-label) — maybe ~50%.

Findings all three reviews agree on

#	Problem	Evidence	Fix	Needs from Alex
1	Contact form loses and repels leads	shows success even on failure (Q-11); budget pre-selected \$2k, USD only, \$25k+ cap; phone required; services list has "Theme Store", no Migration/Apps/Integrations; success text "We will back shortly to you"; English on /de/	fix failure state; phone optional; EUR budget incl. "not sure"; services = the 6 pages, pre-selected from the page; store URL field; correct success copy + "what happens next"; DE form on DE page	OK to change fields (ClickUp receiver stays)
2	Pricing card on Shopify Development anchors the €5–15k buyer at \$2200	"from \$2200 ... premium template ... Payment and shipping setup for Ukraine" under "more than a theme"	replace with one EUR range line + "fixed quote after scoping / paid discovery" (closes Q-13)	the range you are comfortable publishing
3	Who we are is hidden	Kyiv only on old home; no entity, invoicing, contract, code ownership, DPA; header "UTC: +2" (Kyiv is UTC+3 now); only sales people shown	shared "Working with us" block/FAQ on every service page: team location + hours overlap with CET, EUR invoicing via [legal entity], you own the code/repo, DPA/GDPR, who you talk to	facts: legal entity, invoicing currency, contract, DPA, team size, lead dev name/photo
4	Proof exists but isn't used	UK gifting brand cited ~12x, case study linked from no service page; Prime EVA card links to their shop; App Store apps not linked; reviews signed only by company names; same Gunia quote with 5 different tags	link case studies + App Store listings from cards/FAQ; add role + country to reviews; link Clutch/Upwork profiles; numbers into Fresh Market and UK case	permission to name clients / add metrics; Clutch/Upwork URLs
5	Old home + lms.txt contradict the position	"web design and development agency... seamless... solutions", BONKIND still shown	interim hero/sub-line/3 pillars (brand review has a proposal) until Marko's Home copy	Marko or you approve interim hero
6	"Approach" block on every page is agency-speak	"Immersion / Transparency / Quality", "we work within your budget"	replace with three proof-backed principles: scope before quote · tell you when you don't need it · stay on what we build	—
7	CTAs inconsistent , "Book a call" leads to a form	6 labels for one drawer	one label per slot + one line "what happens after you send it"	—

#	Problem	Evidence	Fix	Needs from Alex
8	Process stages list activities only	Stage 1–4, no deliverable/duration/whether stage 1 is paid	add "You get: ... · ~N weeks" per stage	typical durations; is discovery paid?
9	DACH page not prod-ready	placeholder photo; "Expertise vor Ort" implies on-site presence; no Impressum/Datenschutz in DE; FAQ duplicated from Integrations; "Complex Solutions" name has no "Shopify"	real photo or hide block; rename label; DE legal pages; 4–6 DACH-specific FAQ; H1/name with "Shopify + ERP"	photo; Karl on-site yes/no; Impressum data
10	Unverifiable claims	CRO "50–200%" (UWG §5 risk in DE); 14 "delivered" systems without cases	keep only with a source on file, otherwise soften	source for 50–200%

Also: four spellings of the name (Base X / Base X Tech / BaseX-Tech / Base-X-Tech) → pick one; service pages dead-end (no links between related services); header Portfolio/Team/Clients jump to the old home.

Dev-only note: `/blog/` is 404 on dev (the blog is proxied by a Cloudflare Worker on prod only) — can be redirected to prod on dev so reviewers don't hit dead links.

Proposed order

Now, no input needed (bridge, S): 6 Approach block · 7 CTA labels + next-step line · form copy/success/failure state, phone optional, services list · internal links to cases/App Store/related services · one company name · header UTC · dev `/blog/` redirect.

Now, after your facts (bridge, S): 3 "Working with us" block · 2 pricing line · 1 EUR budget options · 4 named reviews/metrics · 8 stage durations · 9 Karl photo/label.

With Marko: 5 interim home hero · 10 claims · DACH-specific FAQ · Home/About copy.

Redesign: case-study template per service, About page with team, portfolio page.

Conversion review: dev.base-xtech.com (bridge release)

Date: 2026-09-24 · Reviewer role: B2B conversion / agency lead gen · Scope: EN pages on dev, the contact drawer (layout/drawer/form.ejs) and its handler (src/main.js), checked against the content lead's sources (content/source/*) and docs/OPEN-QUESTIONS.md .

Buyer used as the lens: an EU/DACH merchant with a €5–15k custom build, evaluating an agency they have never worked with. That buyer isn't asking "can they code Shopify?" The questions are "will this go wrong, will they disappear, what will it really cost, and who am I actually dealing with?"

Visual style is out of scope. Where a fix needs a new layout, it's marked **redesign**. Where it's a string, a partial or a data change, it's marked **bridge**.

Scores

#	Dimension	Score	One-line justification
1	Above-the-fold clarity	6/10	The service H1s say what and for whom in about 3 seconds ("Shopify migration without losing what already works"). No hero shows why us (proof), where (EU) or what happens next, and the home hero is still "Essential design & development".
2	Pains	6/10	Operational pains are specific and credible (re-typed orders, stock drift, SEO loss, API deprecation). Buyer-risk pains (vendor risk, hidden cost, who does the work, time zone, Ukraine) are almost absent.
3	Triggers & proof	4/10	The same three testimonials appear everywhere, and one quote's tag is relabelled to fit each page. No project card links to a case study, and Prime EVA links out to the client's live store. The only outcome number (CRO "50-200 %") has no case behind it. The DACH partner is a grey placeholder.
4	Objection handling	6/10	The FAQs are the best copy on the site: honest, technical and specific ("A rebuild you did not need is the most expensive thing on a Shopify project"). They answer technical objections only. Commercial ones (price, contract, ownership, continuity, communication) go unanswered on 6 of 7 pages.
5	CTAs	4/10	Six labels ("Discuss Your Project", "Get Quote", "Book a call", "Let's Talk", "Contact us", "discuss a project") all open the same form. "Book a call" promises something that doesn't exist, and nothing says what happens after you click.
6	Form friction	3/10	Phone and company are required. Budget is in USD and pre-selected at \$2k . The service list doesn't match the services sold. The textarea is optional. The success copy is broken English, and it shows even when the submit fails.
7	Cross-page journey	3/10	Service pages have zero in-body internal links. Cross-sell cues in the copy ("They get rebuilt, not carried over") go nowhere. Cases aren't linked. Nav "Portfolio / Team / Clients" drops the buyer onto the old-copy home. /blog/ is 404 on dev.
8	Quick-win potential	8/10	Most of the damage is strings, one partial, the form and the links. About 70% of the lift is available without the redesign.
Overall (conversion readiness today)		4.5/10	The new copy is genuinely strong (about 7/10 as writing). It's wrapped in legacy pricing, a leaky and cheap-signalling form, recycled proof and no journey. The copy earns attention and the mechanics waste it.

Top 10 issues, ranked by expected impact on enquiries

1. The form loses leads silently and pre-qualifies every lead as "\$2k"

Evidence

- src/main.js: the finally block runs successMsg.classList.add('success') whatever happens. If the ClickUp POST fails (non-2xx, result.success false, or a network error), the visitor sees "thanks" and the lead is only console.error -ed. This is already logged as Q-11 and was left out of scope. It shouldn't be.

- `layout/drawer/form.ejs`: `<input type="radio" name="budget" value="$2k" checked>`. Every visitor who doesn't touch the radio is recorded as a \$2k lead in ClickUp, and the first thing a €10k buyer sees is a \$2k anchor.
- Success copy, verbatim: "thanks you for submitting the form / We will back shortly to you with response." That's two grammar errors, in the very moment a stranger is judging whether you're careful.
- The lead payload has no page URL. Only UTM params, browser language and the service select are sent, so you can't tell which service page converted.

Why it matters for this buyer

- A €5–15k enquiry is rare: a handful a month. Losing one silently costs more than any copy fix earns.
- The \$2k default tells a DACH buyer "this is a cheap shop", which is the opposite of "if the build is the hard part, that's the work we take".
- Broken English at the moment of commitment confirms the offshore-risk fear.

Fix

- Show success only on `result.success`. On failure, show: "Something went wrong on our side and your message was not sent. Please email hello@base-xtech.com, or try again." Keep the typed values.
- Remove `checked`. Make the budget field required with no default.
- Add a hidden `page` field (`location.pathname`) to the payload.
- Replace the success copy with: "Thank you, we have your message. You will get a reply from a person on our team within one business day (Kyiv time, CET+1). Usually it's two or three questions about your store, then a 30-minute call if it makes sense." Confirm the SLA and wording before shipping.

Effort: S · bridge

2. The legacy pricing block on Shopify Development contradicts the positioning and anchors below the target deal

Evidence (<https://dev.base-xtech.com/pages/shopify-development/>, the "Shopify Development Pricing" block)

- "Quick Start **from \$2200** / 3-5 weeks" with "Responsive design (**premium template**)" and "Payment and shipping setup **for Ukraine**".
- "Shopify Turnkey from \$4500" with "Unique Shopify store that will **leave competitors behind**" and "**Seamless** integration with business systems".
- The block sits directly under an H1 that says "for stores that need more than a theme". Q-13 kept it by default, and it isn't in the content lead's source (`02-shopify-development.txt` has no pricing).

Why it matters

- The EU buyer reads three things in five lines: a template shop, a Ukrainian-market offer, and a price 2–7× below their budget.
- The price makes them doubt the "complex builds" claim. The "Ukraine" line tells them this offer isn't for them.
- "Seamless" and "leave competitors behind" are on the content lead's banned list, so the page contradicts itself.
- A buyer who does trust the price arrives expecting €4.5k for a €12k scope, and that's a lost deal at quote stage.

Fix

- Delete the block. Replace it with a single pricing-signal paragraph, which can reuse the existing stats or text partial.
- Suggested copy: "What builds cost. Most custom builds we take on fall between €5,000 and €15,000; integration-heavy builds run higher. You get a written scope and a fixed quote before any code is written, and we will tell you if what you need is smaller than the work we take on." Confirm the numbers with sales before publishing.
- Show the same range in the form's budget options (see #6).

Effort: S · bridge

3. The proof exists but isn't connected: cases are unlinked, off-site or missing

Evidence

- Every service page's "Recent Projects" cards have no link, except Prime EVA, which links to <https://primeeva.com/>. That sends a warm lead to a client's store with no way back.
- The "UK gifting brand" appears in at least 12 FAQ answers and cards across Integrations, Migration, Apps and CRO ("1M+ profiles and thirteen years of history"). Its case study exists on production (<https://base-xtech.com/blog/custom-shopify-integrations-gifting-brand/>, HTTP 200), yet no service page links to it.
- Shopify Development leans on configurators ("Can you build a product configurator on Shopify? ... Prime EVA is the example"). The home page links a configurator case (</blog/shopify-product-configurator-naya-tech/>) that this page never mentions.
- Nova Poshta Connect and "Mo: Story Slider Navigation ... 5.0 rated" on the Apps page don't link to their App Store listings. That's the one piece of third-party-verifiable proof you own.

Why it matters

- An agency the buyer doesn't know is judged on "show me one thing like mine". The site says it has that thing and then won't show it.
- A case study also tends to be the page that directly precedes an enquiry on agency sites. Right now it's unreachable from the money pages.

Fix

- Link each project card to its case study, or to the App Store listing. Add "Read the case →" under the card description.
- In FAQ answers, turn the first mention of "UK gifting brand" on each page into a link to the case.
- Add Naya Tech (configurator) as a card, or link it from the configurator FAQ.
- Make the Prime EVA link a case link if a case exists. If not, remove the external link.
- Confirm the blog URLs resolve on prod after release, since </blog/> is 404 on dev.

Effort: S (links) / M (writing a Prime EVA case) · **bridge**

4. Vendor-risk objections aren't addressed anywhere

Evidence

- FAQ sets on all service pages are about technology. "Who owns the app and the code? You do... including the repository" appears only on the Apps page.
- Nothing on any service page answers any of these:
 - where the team is and who actually does the work (in-house or freelancers);
 - which language and time zone you'll work in;
 - how you're invoiced (EUR? EU contract?);
 - what happens if you part ways;
 - warranty or bug-fix period. The only mention is inside the legacy pricing block: "30 days of warranty support".
 - Ukraine and continuity.
- Home says "based in Kyiv, Ukraine" and the header says "UTC: +2". Kyiv is UTC+3 today, so the header is wrong half the year.
- The DACH brief asked for "Talk to us in German or English" and FAQ angles such as "GoBD / DATEV exports, hosting in the EU, German-language support". None are on the live DACH page, which reuses the Integrations FAQ verbatim (Q-19).

Why it matters

- For a first-time €5–15k buyer, these objections outweigh the technical ones.
- A DACH buyer who sees "Kyiv" will think "what if the team can't work next month?" and won't ask. They'll just pick the Berlin agency.
- Answering it plainly is a differentiator. Hiding it isn't.

Fix

- Add one shared FAQ partial, "Working with us", with four rows, included on every service page and the DACH page. It only needs confirmed facts. Suggested wording, facts to be verified:
 - **Who actually does the work?** "Our own team of 20+ designers and developers in Kyiv. No freelancers or subcontractors on your code. Your project has one project manager from scope to launch."
 - **What about time zones and language?** "We work CET-overlapping hours, in English, and German with our DACH partner Alexander Karl. You get a shared channel and a weekly written status."
 - **Is it risky to work with a team in Ukraine?** "We have delivered continuously since 2022. [State the real continuity measures: backup power and connectivity, a distributed team, code in your repository from day one.] Your code and access are never only on our side."
 - **How is it contracted and invoiced?** "Fixed quote after scoping, a written contract, invoicing in EUR. Code, repository and accounts are yours. If you move on, we hand over documented."
- Add a DACH-specific row: "Can we work in German?"

Effort: S (copy + partial) · **bridge**. The facts need a sales/founder sign-off.

5. CTAs are inconsistent, and "Book a call" makes a promise that doesn't exist

Evidence (<https://dev.base-xtech.com/pages/shopify-development/>)

- Hero: "Discuss Your Project". Pricing: "Get Quote" x2. Approach block: "Book a call". Closing: "Let's Talk". Header: "Contact us". Footer widget: "Discuss Your Project / Sofia Zabrodska".
- Every one of them opens the same drawer, whose title is "let's discuss a project".
- The DACH page uses "Book a call" everywhere (4x). Q-5 says there is no calendar: it "opens our contact form", which then requires a phone number.
- No CTA says what happens next.
- The closing lines are good and should be the template: "Tell us what the two systems are and we'll tell you what connecting them takes." (Integrations). "Tell us what you're on now and we'll tell you what moving actually involves." (Migration).

Why it matters

- "Book a call" sets up an expectation of picking a slot. Getting a form instead feels like bait, and bounce at the drawer is highest for exactly the buyer who wanted a call.
- Six labels also read as six different things. That's a small but real clarity tax.

Fix

- Use one primary action per page with one label. For service pages, keep "Discuss Your Project" in the hero and "Let's Talk" in the closing CTA, as the slot map intends.
- Remove "Get Quote" (it goes with #2).
- Rename "Book a call" to "Discuss Your Project" (DE: "Projekt besprechen") until a real calendar exists. When it does, "Book a call" should open the calendar, not the form.
- Add one micro-line under the hero CTA and the closing CTA, in the existing lead or body slot: "A person replies within one business day. No sales sequence." Confirm before shipping.
- Retitle the drawer from "let's discuss a project" to the page's own ask, e.g. "Tell us what the store has to do".

Effort: S · **bridge**

6. The form asks the wrong things, in the wrong order, in the wrong currency

Evidence (`layout/drawer/form.ejs`)

- `Phone *` and `Company *` are required. The placeholder "e.g. Inditex" sets an enterprise frame the €5–15k buyer isn't in.
- The service select offers "Shopify Development / Website Design / Custom Development / API Integration / Theme Store". There's no Migration, Custom Apps, CRO or ERP/DACH option, no "Not sure", and a default of "Shopify

Development" with no placeholder.

- Budget options are \$2k / \$5k+ / \$10k+ / \$25k+ in USD, with \$2k pre-checked.
- The most useful field is last and optional: "Tell us more if you need".

Why it matters

- Required phone is the single biggest drop-off field for cold B2B buyers, especially DACH, where an unsolicited call is unwelcome.
- Company as a text field is weaker for qualification than the store URL, which also tells sales the platform, size and market in ten seconds.
- A service list that doesn't include what the visitor just read about makes the form feel like it belongs to another company.

Fix (keep it at 6 fields, reordered)

1. **What does the store need to do?** Required textarea. Placeholder: "e.g. Connect Shopify to our JTL-Wawi so stock and orders sync; migrate from Magento 2 without losing rankings".
 2. **Store URL** (optional). Replaces Company.
 3. **Service**. Mirror the nav: Shopify development · Integrations / ERP · Migration · Custom app · Design · CRO · Not sure yet. Pre-select from the page the drawer was opened on.
 4. **Budget** in EUR, no default: "Under €5k · €5–15k · €15–40k · €40k+ · Not sure yet".
 5. **Name** and **Work email**, both required.
 6. **Phone**, optional, labelled "Phone (optional, only if you prefer a call)".
- Under Send, add: "We use your details only to reply to this enquiry. Privacy policy." A DACH buyer expects to see this.
 - Rename Send to "Send enquiry".

Effort: S–M (template plus handler field mapping) · **bridge**

7. Social proof is recycled and relabelled, and the one outcome claim can't be verified

Evidence

- All six service pages show the same three quotes: VT Advantec, Lili Mager, Gunia.
- The same Gunia sentence ("I can recommend them both for store migration and for theme customization") is tagged "Theme Development" (dev, apps), "Migration" (integrations), "Store Migration" (migration), "Theme Customization" (web design) and "Website Redesign" (CRO).
- "Lili Mager" has no company or role. The Lili Mager quote exists in two wordings across pages (Q-15).
- Clutch (clutch.co/profile/base-x-tech) is linked only on the home page. Upwork appears only as a footer icon.
- CRO says "50-200 % conversion uplift range" with no case. The CRO project cards are UX work ("Enquiry flow built for pieces sold on request"), not measured results. The content lead warned about this: "the thing a sceptical DACH buyer tests you on" (`06-conversion-rate-optimization.txt`, line 225).

Why it matters

- A buyer who reads two service pages (and most who enquire do) sees identical quotes with different labels. That reads as padding, not as three happy clients.
- An unbacked outcome claim is the first thing that breaks trust with an analytical DACH buyer.
- The claim is also a UWG §5 exposure, the same risk the DE reviewer flagged for the systems strip.

Fix

- Keep one tag per quote everywhere (the service it was really about).
- Add "Lili Mager, [role], [company]" if you have permission; otherwise drop it.
- Next to the stats line, add linked text: "4.8 on Upwork (see reviews) · Clutch profile", linking to the real profiles. Verifiable beats impressive.

- On CRO, either attach the range to a named or anonymised case ("Innan Jewellery: enquiry rate +X% after ...") or replace it with a countable stat ("100+ projects"), as the other pages do.
- Collect two new quotes: one integration or ERP client (Fresh Market would suit Integrations and DACH), and one from the UK gifting brand.

Effort: S (tags, links, CRO stat) / M (new quotes) · **bridge**

8. The DACH page has the right structure, but its trust layer is unfinished

Evidence (<https://dev.base-xtech.com/pages/complex-solutions/>)

- Alexander Karl's photo is `<div class="person-quote--placeholder" ... aria-label="Photo of Alexander Karl (placeholder)">`. This is known (Q-4) and prod is already blocked on it.
- His quote is generic. "ERP integration isn't just about connecting APIs – it's about understanding business processes..." could be signed by anyone and says nothing about him: no years, no systems, no location, no "call me".
- The brief's intended "Talk to us in German or English" line is missing.
- Every CTA is "Book a call" into the anonymous form, whose footer widget shows "Sofia Zabrodska", not Alexander.
- The Fresh Market case has no numbers, no timeline and no client quote. "Key outcomes" restates the capability names ("Private App", "Inventory Sync") instead of outcomes.
- The "Go deeper" cards include a Ukrainian Nova Poshta article and an AI analytics post. Neither is DACH- or ERP-relevant, and on dev all three 404.

Why it matters

- The whole point of the page is "a person in the region". A faceless partner with a textbook quote removes the one advantage the page has over the Integrations page.

Fix

- Real photo (already planned).
- Rewrite the quote in first person with specifics Alexander can sign off on. Pattern: "I have spent [N] years on ERP projects in Germany and Switzerland. When you talk to Base X Tech about a DACH integration, I am in the first call, in German, and I stay the person you can reach."
- Under his name, add "Talk to us in German or English."
- Add one number to Fresh Market (overselling incidents or manual corrections before and after, SKUs, locations, weeks to live), even if approximate and approved.
- Replace the Nova Poshta card with the UK gifting case, which is the ERP- and production-heavy one.
- Replace at least 3 of the 8 duplicated FAQs with DACH ones: GoBD/DATEV, EU hosting of middleware, German-language support, contract under German law or EU entity (only if true).
- Change the CTA label per #5.

Effort: S–M (depends on Alexander) · **bridge**

9. There's no journey: service pages are islands, and nav sends buyers to the old home page

Evidence

- The only internal links on every service page are the nav and footer. Project cards and FAQ answers don't link, and there's no "related service" link.
- Perfect bridges exist in the copy and go nowhere:
 - Migration FAQ: "They get rebuilt, not carried over. Your ERP, CRM, fulfilment and courier connections..." should point to Integrations.
 - Shopify Development capability "Custom Checkout" should point to Apps ("Functions & Extensions").
 - Web Design's "then build it ourselves" should point to Shopify Development.
 - CRO "Speed & Core Web Vitals / It is development work" should point to Shopify Development.
 - Integrations should point to Complex Solutions (the DACH brief says "The two link to each other").

- Nav "Portfolio", "Team" and "Clients" link to `/#section-works`, `/#section-team` and `/#section-reviews`. That's the home page with old copy ("We craft seamless, high-performing online stores", "let's get down to business"), and its portfolio (Naya Tech, bonkind, klott) doesn't match the service pages' projects. bonkind was dropped per the slot map but is still on home.
- The home service cards ("ecommerce", "website & identity", "Development") don't link to any service page.

Why it matters

- An agency buyer typically views 3–5 pages before enquiring.
- Every click that lands on the old home page resets the tone from "specific engineers" to "generic studio", and every page without a next step is an exit.

Fix

- Add one contextual in-text link in one FAQ answer per page. That's five link edits, no design needed.
- Add "Related: Shopify integrations →" under the closing CTA body.
- Link the home service cards to the matching service pages.
- Until home copy lands, swap the home H1 and lead (two strings) to the positioning line. Suggested: "Shopify development for stores that need more than a theme" / "Store builds, custom apps, integrations and migrations for merchants in the EU and UK. If the build is the hard part, that's the work we take." Title-only was the Q-1/Q-14 default, but these two strings are the cheapest conversion fix on the site.

Effort: S · bridge

10. Legacy generic blocks sit next to the new copy on every page

Evidence

- Every service page carries the old "Approach" block:
 - "we work within your budget"
 - "Immersion: We're dedicated to crafting new solutions that push the boundaries of what's possible, ensuring your business stays ahead of the curve."
 - "Quality: Excellence is woven into everything we do..."
- "dedicated" and "solutions" are on the content lead's banned list (`00-slot-map.txt`, voice rules).
- The home version even has the typo "Transparence".
- The block's one useful asset, three named people (Vadym-Marko Hruden, Head of Sales; Vadim Hula, Project Manager; Sofia Zabrodska, Business Development Manager), is wasted on platitudes.

Why it matters

- Placed directly after the most specific FAQ on the page, this block reads like a template.
- It also answers "who will I talk to?" badly when it could answer it well.

Fix

- Keep the layout and replace the three texts, via the partial, with who does what for the client:
 - Vadym-Marko: "Your first call. Scopes the build and writes the estimate."
 - Vadim: "Runs your project day to day. Weekly written status."
 - Sofia: "Answers your enquiry within one business day."
- Label: "Who you'll work with". Drop "we work within your budget" (it signals cheap; see #2).
- Confirm the roles are accurate.

Effort: S · bridge

Per-dimension notes (evidence not covered above)

1. Above the fold. The Shopify Development, Migration and Integrations heroes pass the 5-second test on what and for whom:

- "Custom checkout, configurators, B2B and retail on one stack."
- "Magento, WooCommerce, BigCommerce or something built in-house."

What none of them has above the fold:

- **Proof.** The "100+ / 4.8 Upwork" line sits below the six capability cards.
- **Geography.** Nothing says EU or DACH.

Adding one proof line under the lead (bridge; it may need a slot) is the cheapest trust gain. Web Design's H1, "Shopify design for products that take more than one click", is clever but takes a second read. The DACH H1 "Complex systems, connected around how your business works." never says Shopify (the DE notes flag this too).

2. Pains. Named well:

- manual re-typing, stock drift, missing ERP apps (Integrations);
- end-of-life platform, hosting cost, dev dependency (Migration);
- "Someone on your team is the integration" (Apps), the strongest pain line on the site.

The "When We Can Help" cards on service pages are titles only (the footer is empty in HTML). That's acceptable per the slot map, but on the DACH page the same cards carry a sentence each and read better. Missing pains are covered in #4, plus "the last agency left us with a mess": only Apps touches it ("Can you take over an app someone else built?"). Shopify Development has the perfect line buried in the last FAQ: "Handing over a login and disappearing is where most of the problems we get called in to fix started." Promote it to the "When We Can Help" H2 area or the closing CTA body.

3. Triggers.

- **Scarcity/urgency:** none, and correctly so for this buyer. Don't add any.
- **Risk reversal:** implicit only ("we scope and estimate before writing code", "we will say so rather than sell you the upgrade"). Make it explicit: "Fixed quote after scoping; you can stop after the scope and keep the document." (Only if true; this is a strong move for €5–15k.)
- **Process transparency:** good. The four stages per page are specific and differentiated.
- **Authority:** two App Store apps, unlinked (see #3). No Shopify Partner badge or tier is mentioned anywhere; add it if you hold one.

4. Objections. The technical FAQ answers are best-in-class for agency sites. Keep them word for word. What's missing is the commercial layer (#4), and a "what does it cost" row on Shopify Development, Integrations and Apps. Web Design has one, but it dodges: "It depends on the number of page types...". Give a range.

5–6. See #1, #5 and #6.

7. See #3 and #9. Also: DACH "Go deeper" blog cards link to English articles without a marker (DE review, should-fix).

Quick wins (no new design) vs redesign

Bridge (copy, partials, form, links) — do before prod:

1. Form: success only on real success, remove the \$2k default, fix the success copy, add the page field (#1).
2. Remove the pricing block and add a EUR range sentence (#2).
3. Link project cards and first FAQ mentions to case studies and App Store listings (#3).
4. "Working with us" FAQ partial (#4, needs facts).
5. One CTA label per slot; rename "Book a call" until a calendar exists; one line on what happens next (#5).
6. Form fields: phone optional, store URL instead of company, services matching the nav, EUR budget, privacy line (#6).
7. Consistent testimonial tags, Upwork/Clutch links, CRO stat fixed (#7).

8. DACH: real photo, specific quote, "German or English", one Fresh Market number, DACH FAQs (#8).
9. Contextual links between services; home H1 and lead swap; home service cards linked (#9).
10. Approach block rewritten as "Who you'll work with" (#10).

Redesign:

- Proof bar in the hero (logos, rating, App Store) as a designed element.
 - Case-study template with numbers (problem → built → result → quote).
 - About page (the "who are we" answer; Q-2).
 - Real calendar booking with a slot picker for DACH.
 - A pricing or "typical engagements" section as a designed component.
 - Sticky or secondary CTA on long pages.
 - Related-services module.
 - Team photos (Q-10).
-

What's already strong — keep it

- **The FAQ copy on all six service pages.** It's specific, candid and turns the scope conversation into proof of expertise:
 - "A rebuild you did not need is the most expensive thing on a Shopify project."
 - "Migrations rarely fail on launch day. They fail three weeks later..."
 - "we would not claim to maintain an app we have never seen."
 - "...we will say so rather than sell you the upgrade."

This is the voice that sells a €10k build to a sceptic. Don't dilute it in the redesign.

- **Service H1s and leads** (Shopify Development, Migration, Integrations, CRO). Clear who, what and outcome, with no banned words.
- **Per-service process stages.** Each has a reason clause ("because what gets missed is what gets lost"), which is process transparency done right.
- **Closing CTA bodies** in the form "Tell us X and we'll tell you Y". They lower the ask to a single fact the buyer already knows. Reuse the pattern for the drawer title.
- **Honest disqualifiers** ("we will tell you if what you need is smaller than the work we take on"). These qualify leads and build trust at once.
- **DACH page structure.** Partner block, architecture explanation, a real named case (Fresh Market), and an honest "Ready to integrate (no delivered project yet)" line that keeps the systems strip truthful.
- **Lead attribution basics** (UTM, gclid, `generate_lead` event). Just add the page path (#1).

Brand and positioning review: dev.base-xtech.com (bridge release)

Date: 2026-09-24 · Scope: positioning, messaging architecture, voice, trust, proof. EN site + DE Complex page. Visual design only where it contradicts the message. Sources read: `https://dev.base-xtech.com/llms-full.txt`, `/llms.txt`, `/ (raw HTML)`, `/pages/complex-solutions/`, `/de/pages/complex-solutions/`, the six service pages (raw HTML, for sections that llms-full does not carry: capabilities, project cards, testimonials, pricing, CTAs), `content/source/*.txt`, `docs/discovery/2026-09-24-quick-en-site.md`, `docs/OPEN-QUESTIONS.md`. All URLs below are relative to `https://dev.base-xtech.com`.

Verdict

The six new service pages are good. They are specific and plainly written, they disqualify people honestly, and together they already imply one position: *the Shopify team for stores where the build is the hard part*. That puts them ahead of most EU and Ukrainian Shopify agency sites. The site as a whole does not yet say that position, though. It does the opposite in four places a buyer cannot miss. The home page and `llms.txt` still describe a "web design and development agency" that crafts "seamless" stores for fashion and lifestyle brands. The same banned-word "Approach" block ("Immersion... crafting new solutions that push the boundaries") and the headline "we work within your budget" appear on every service page. The most important service page, Shopify Development, carries a "\$2200 premium template, shipping setup for Ukraine" price card. The lead form still sells "Website Design / Theme Store" from \$2k. Each of these tells the buyer "cheap generalist", and each sits right next to copy that says "specialist". The "complex" idea is also split: the site-wide promise lives in one sentence on Shopify Development, while the page actually called "Complex Solutions" only covers DACH integrations. For an EU or DACH buyer, the site also doesn't answer "who are you, where are you, who signs the contract" anywhere except one line on the old home page and a Terms page governed by Ukrainian law. None of these problems needs a redesign. About 80% of the damage can be fixed in the bridge with copy-only changes to shared blocks.

Positioning statement

As the site currently implies it (reconstructed from what a visitor actually reads)

For **eCommerce brands in fashion, lifestyle and digital retail** (/ hero), Base X Tech is a **web design and development agency based in Kyiv** (/ , /llms.txt) that **crafts seamless, high-performing online stores and brand identities** (/) and also does Shopify development, integrations, migration, apps, design and CRO (nav). Unlike...: *nothing stated*. Because: **4.8 on Upwork, 60+ clients, 100+ projects**, and **values of Immersion, Transparency and Quality** (every page).

A second, better position runs underneath it on the service pages, but no page states it:

For stores that need more than a theme... if the build is the hard part, that's the work we take. (/pages/shopify-development/)

As it should read (proposal)

For established merchants in the EU, UK and DACH whose Shopify store has to do something a theme and an off-the-shelf app can't, such as configuring products, selling B2B beside retail, staying in step with an ERP, POS or warehouse, or leaving a platform nobody documented, **Base X Tech** is the Shopify engineering team that designs, builds and connects that store as one team, and stays on it after launch. **Unlike** design-led agencies that subcontract

the hard part, or dev shops that build what they're told, **we decide the data model and which system owns every number before code is written, and we tell you when you don't need the expensive option** (Plus, headless, a rebuild). **Proof:** a migration off an in-house platform (1M+ customer profiles, 13 years of history, UK gifting brand); configurators built into the storefront (Prime EVA); POS and online stock on one flow (Fresh Market); our own app on the Shopify App Store (Nova Poshta Connect); 100+ projects, 60+ clients, 4.8 on Upwork.

The category is **Shopify engineering**, not "web design and development". The customer is **the merchant with a hard build**, not "eCommerce brands". The differentiator is **one team from design to integration, plus honest scoping and ownership after launch**. The service pages already contain every piece of this. It just needs to be said once, at the top.

Findings by dimension

1. Positioning: one clear, ownable position?

No. There are two positions, and the weaker one is in the most visible places.

Where	What it says	Position it signals
/ H1	"Essential design & development"	generalist studio, no category, no Shopify
/ hero lead	"We help eCommerce brands scale with automation, smart workflows, and cutting-edge design—reshaping fashion, lifestyle, and digital retail."	vertical = fashion/lifestyle; design-first
/ pillars	"ecommerce / website & identity / Development", tags "UI/UX, Branding, Logo... React, Next.js, Node.js, SQL"	branding studio + generic web dev; Shopify is one tag of many
/ about line	"a web design and development agency based in Kyiv, Ukraine. We design, develop, and deliver innovation, efficiency, growth, and impact."	generic
/ meta + /llms.txt line 3	"Web design and development agency ► BaseX-Tech ★ We create solutions that combine innovation, efficiency, and real impact on business growth."	this is the first sentence an AI assistant reads about the company, which works against the GEO goal
/llms.txt line 5	"a web design and development agency building Shopify stores..."	design first, Shopify second
/pages/shopify-development/ lead	"If the build is the hard part, that's the work we take."	the real position , but it appears once, on one page
Six service H1s	"stores that need more than a theme", "systems your business runs on", "without losing what already works", "workflow you actually have", "products that take more than one click", "where the fix is in the build"	consistent <i>implicit</i> theme: hard Shopify work, done and owned by the builders
Nav	"Ecommerce" (links to Shopify development) / "Design"	still the old "Design Development" split; "Shopify development" is not even a visible label in the desktop menu (it hides behind "Ecommerce")

Where the position gets diluted:

- **Web Design** holds up. It is positioned as build-ready design for configured and compared products ("We design the storefront that carries that decision, then build it ourselves"). It supports the position rather than diluting it.
- **CRO** mostly holds up ("Conversion work for stores where the fix is in the build"). Only the "50–200% uplift" claim pulls it toward a generic growth-agency pitch (see §6).
- **The old home copy, nav taxonomy and shared Approach block** are what dilute the position. The home page also still shows **bonkind** ("Brand identity & redesign of self-care ecommerce"), which Marko's brief explicitly drops, and "Logo / Branding" tags. Both invite a branding brief the team doesn't want.

- **The "Complex" idea is split.** The site-wide promise ("the hard part") sits on Shopify Development. Meanwhile the page named **Complex Solutions** is narrowly "ERP/POS/middleware integration for DACH", and its H1 doesn't mention Shopify ("Complex systems, connected around how your business works."). To a first-time visitor, "Complex Solutions" in the nav reads as a separate business line, not as the spine of the brand. "Solutions" is also on Marko's banned list.
- **The reason to believe is thin at the level of the position.** The stat block ("100+ projects, 60+ clients, 4.8 Upwork") proves volume and client satisfaction, not complexity. The complexity proof (1M profiles, 13 years, production engine, native configurator, POS sync) is scattered through FAQ answers.

2. Differentiation vs typical Shopify agencies

The comparison set: UK and EU Shopify (Plus) partner agencies, which lead with brand portfolios, Plus badges and design awards. DACH Shopify agencies, which lead with German-language service, local presence and JTL/Xentral connectors. Ukrainian and Eastern European dev shops, which lead with rates, "dedicated team", Clutch badges and tech-stack lists.

What a competitor could NOT say (keep, and move these up):

- "Nova Poshta Connect, which is ours", a self-built, public App Store app (/pages/service/custom-shopify-app-development/). Few agency sites have their own listed app.
- "1M+ customer profiles migrated, 13 years of history moved" off "a platform built in-house" (/pages/service/shopify-migration-service/).
- "a production engine that turns each order into print-ready files, batches them and routes them to the production queue, plus a fulfilment layer that... schedules pickups twice a day" (/pages/service/custom-shopify-integrations/).
- "Prime EVA... a custom configurator running inside their Shopify store rather than as a bolted-on app" (/pages/shopify-development/).
- Fresh Market: POS and online stock on one flow (/pages/complex-solutions/).
- A multi-year partner relationship quoted by name (VT Advantec: "a highly trusted extension of our team").
- A Kyiv engineering team paired with a DACH partner. This is only a differentiator if it's framed openly (see §5).

Specific and rare in tone (a real differentiator if it's kept consistent): the "we will tell you what you don't need" pattern.

- "a standard plan is usually enough and we will say so rather than sell you the upgrade" (/pages/shopify-development/)
- "Headless... Less often than it gets recommended" (same)
- "A rebuild you did not need is the most expensive thing on a Shopify project" (same)
- "we would not claim to maintain an app we have never seen" (/pages/service/custom-shopify-app-development/)
- "we will tell you if what you need is smaller than the work we take on" (/pages/service/custom-web-design-services/)
- "Migrations rarely fail on launch day. They fail three weeks later, when nobody is looking at the coverage report." (/pages/service/shopify-migration-service/)

These lines make up the brand. Right now they are buried in accordions.

Generic (any agency could say it, so cut it):

- "Immersion / Transparency / Quality... Excellence is woven into everything we do" (every service page, /)
- "we work within your budget" (section headline on every service page)
- "Foundations of Impactful Digital Experiences", "The Minds Behind Your Vision" (/)
- "Unique Shopify store that will leave competitors behind... for maximum sales" (pricing, /pages/shopify-development/)
- "Seamless integration with business systems (CRM, ERP, etc.)" (same)
- "making systems work together seamlessly", "Our approach ensures..." (Karl quote, /pages/complex-solutions/)

- "a connected commerce system... working together behind the scenes" (Fresh Market case)

"Complex Shopify builds" on its own is **not ownable**. Many UK and DACH agencies say "complex". It becomes ownable through the *mechanism*: "we decide which system owns the number before anything is built", "run real orders through it, including the ones that fail", "we stay on it after launch". Pair "complex" with the mechanism every time.

3. Messaging architecture: promise → pillars → proof

Brand promise: missing. No page says the umbrella line. The template repeats page-level promises, but nothing ties them together.

Pillars: six parallel pitches, with a good shared skeleton. Each service page has the same structure (hero → capabilities → projects → when we can help → testimonials → 4-step process → FAQ → CTA). The same beliefs recur: *scope before code, real data including failures, stay on it after launch, same team designs and builds*. That consistency is a real asset, and it's exactly what should be named as the brand's three working principles (see Recommendation 2). Right now, the one block designed to state shared principles (Approach) says "Immersion / Transparency / Quality" instead.

A natural three-pillar ladder already exists in the content:

- **Build:** Shopify Development + Web Design ("build-ready design"). CRO sits here as "improve what's built".
- **Connect:** Integrations + Custom Apps. The DACH Complex page is the German-market expression of this pillar.
- **Move:** Migration.

Proof: present but fragmented. Six named or codenamed projects carry the whole site (see §6). Case studies exist on the blog ("Custom Shopify Integrations: A UK Gifting Brand Case Study") but are linked **only** from the Complex page, not from the four service pages that cite the UK gifting brand.

Complex page vs Integrations: the Complex page reuses the **same 8 FAQ pairs** as `/pages/service/custom-shopify-integrations/` (Q-19). Brand-wise, this confirms that it's an Integrations variant, not a separate offer. Position it as "Shopify + ERP/POS for DACH merchants". Don't frame it as "Complex Solutions".

Naming consistency

Form	Where
Base X Tech	page titles, body copy, JSON-LD, Terms
Base X	logo, header "Base X 2021 - 2026", footer "© 2026 Base X All right reserved", testimonials ("Base X went through..."), Terms ("The term 'Base X', 'Base X Tech'...")
BaseX-Tech	<code>/</code> meta description, <code>/llms.txt</code> line 3
Base-X-Tech	old site copy (per slot map), brief file names

Pick **Base X Tech** for all text. "Base X" can stay as the logo mark only.

Service names: mostly consistent between nav, H1s and `llms.txt`. The exceptions are the nav group labels "Ecommerce / Design", eyebrow "Shopify Apps" vs nav "Custom Shopify apps", eyebrow "CRO", and the **lead form's "Service required" options**: "Shopify Development, Website Design, Custom Development, API Integration, Theme Store". Those match none of the six services. Migration, Apps and CRO are missing, and "Theme Store" is a leftover. The form is the last step of the messaging architecture and it runs on the old taxonomy.

CTAs, seven variants: "Discuss Your Project" (hero), "discuss a project" (`/`), "Book a call" (Approach block, Complex), "Get Quote" (pricing), "Let's talk" (CTA label), "let's get down to business" (`/`, an idiom Marko's slot map bans by name), "Gespräch vereinbaren" (DE). The page-specific closing CTAs are excellent and on-voice ("Tell us what the two systems are and we'll tell you what connecting them takes."). Standardise the *button* on one verb and keep the specific body lines.

4. Voice and tone

Service-page body copy: consistent and strong. It uses second person, short declaratives, mechanisms rather than adjectives, and honest limits. Examples: "Stock drifts when two systems both think they are authoritative", "The checking is the slow part and it is not optional", "Someone on your team is the integration." It follows Marko's own rules ("Second person throughout... Lead with specificity").

Where it slips into agency-speak. Each of these uses words the brief bans outright ("seamless, end-to-end, robust, cutting-edge... dedicated, solutions"):

Slip	Where	Banned words
"We're dedicated to crafting new solutions that push the boundaries of what's possible, ensuring your business stays ahead of the curve."	Approach block, all 6 service pages + /	dedicated, solutions, idiom
"we work within your budget"	Approach headline, all service pages	positions on price
"Seamless integration with business systems (CRM, ERP, etc.)", "leave competitors behind", "maximum sales"	pricing, /pages/shopify-development/	seamless
"cutting-edge design", "seamless, high-performing online stores", "robust, high-performance web solutions"	/	cutting-edge, seamless, robust, solutions
"We create solutions that combine innovation, efficiency..."	/ meta, /llms.txt	solutions
"making systems work together seamlessly"	Karl quote, /pages/complex-solutions/	seamless
"Complex Solutions" (nav, eyebrow, page name)	site-wide	solutions
"let's get down to business"	/	idiom

The Approach block does the most damage, because it appears on *every* new page, directly under strong copy, and it puts real people's names and roles (Vadym-Marko Hruden, Vadim Hula, Sofia Zabrodska) beside the emptiest sentences on the site.

Craft errors that undercut a "detail-oriented" claim:

- "Transparence" (/)
- "Success Delivers 100+" (/)
- "Ecommerece Manager in Retail Company" (/)
- "thanks you for submitting the form / We will back shortly to you with response." (form, every page, including DE)
- "© 2026 Base X All right reserved" (footer)
- "what you will get:" (pricing)

For a DACH buyer, a typo in the form confirmation is a trust event.

5. Trust and origin: who, where, who does the work

What a buyer can find today:

- "based in Kyiv, Ukraine" (/ only)
- header "Working Worldwide · UTC: +2"
- Terms: "subject to the laws of Ukraine"
- Privacy: generic GDPR rights, contact hello@base-xtech.com
- named staff in the Approach block and one "Lead designer" on /
- blog bylines (Oleksandr Rudenko, Vadym-Marko Hruden)

What's missing for an EU, UK or DACH buyer:

- **No service page says where the team is.** The only hints are indirect: "a Ukrainian luxury homeware brand", "Carrier app for Ukrainian stores", and the pricing line "Payment and shipping setup for Ukraine". A buyer

reconstructs the origin from clues, which feels like concealment even though it isn't.

- **Time zone is wrong and unhelpful.** "UTC: +2" is static, but Kyiv is UTC+3 on today's date. Say what matters: "Kyiv, one hour ahead of Berlin, year-round".
- **Contract, invoicing, currency:** there is no statement of the contracting entity, the invoice currency, or VAT treatment. Prices are in USD ("from \$2200"; form budgets "\$2k / \$5k+ / \$10k+ / \$25k+").
- **Data and GDPR for the work itself,** not the website: integrations touch customer and order data. There's nothing on a DPA (AVV), where middleware is hosted, or who has store access. The "Who owns the app and the code? You do... including the repository" answer (/pages/service/custom-shopify-app-development/) is a great trust line and should sit site-wide.
- **Continuity:** a Ukrainian team selling to EU buyers in 2026 will be asked about delivery continuity. Silence is worse than one calm line. Only state what's true: power/connectivity backup, distributed team, a track record of delivery through 2022 onward.
- **Founder/leadership:** there's no founder or accountable person. "Team 20+" and a lead designer quote (a design-first signal again) are the only human layer on / . There's no About page yet (Q-2).

DACH partner framing (/pages/complex-solutions/ , /de/...):

- He is labelled "Local Expertise" / "Expertise vor Ort" + "DACH Partner". There's no city, no background, no years, no role in a project. The translator already flagged that "vor Ort" implies physical on-site presence. The label is still live.
- His quote is written in company voice ("Our approach ensures...", "seamlessly"), so it doesn't sound like a person. A first-person block only earns trust if it sounds like one specific person with one specific opinion.
- There's an expectation gap. Per REQ-018 the leads go to the Kyiv team and Karl "joins calls only when needed". Yet every CTA on the DE page opens an **English** form headed "Discuss Your Project / Sofia Zabrodska" with USD budgets. A German buyer who booked because of Karl meets English and dollars at the first step. Say plainly what Karl does ("Alexander joins your scoping call in German and reviews the requirements; the engineering team in Kyiv builds and runs it"). That is more credible than implying a local office.
- The partner quote carefully avoids the unprovable "every major system in the Swiss market" claim (Q-21). Good. Keep it that way.

6. Proof architecture

Inventory

Asset	Named?	Used on	Strength
UK gifting brand (1M+ profiles, 13 yrs, 3 systems, 4–6 months)	codename	Integrations, Migration, Apps, CRO, Complex FAQ + blog case	strongest proof on the site , cited 5× but never linked to its case study from service pages
Prime EVA (native configurator, ERP)	yes	Dev, Integrations, Migration, Web Design, CRO	strong; no numbers
Fresh Market (POS + inventory sync)	yes	Complex (EN/DE)	good story, no numbers, no geography ; the outcomes restate capabilities ("Inventory Sync: Stock availability stays aligned...")
Nova Poshta Connect (own public app)	yes	Apps, Integrations FAQ, Complex blog card	under-used: no App Store link, rating or install signal, and never framed as "we run a product, so we know what API deprecations cost"
Mo: Story Slider Navigation	yes	Apps	"5.0 rated", good
Innan Jewellery, Gunia, KLOTT/naya/bonkind	yes	Dev, Web Design, /	design-led; bonkind is dropped in the brief but still on /
VT Advantec testimonial ("several years... trusted extension of our team")	yes	all pages	best testimonial; reads like a Clutch review, so cite the source if it is one

Asset	Named?	Used on	Strength
"Stealth Startup US / EU", "Lili Mager", "Ecommerce Manager in Retail Company"	anonymous or weak	/ , service pages	the same three testimonials rotate on all six pages with page-specific tags, which is noticeable when browsing
100+ projects / 60+ clients / 4.8 Upwork	numbers	every page	proves volume, not complexity. "Upwork" signals marketplace freelancing to mid-market DACH buyers, so keep it but don't lead with it
40+ (portfolio, /) vs 100+ (elsewhere)	numbers	/	inconsistent counts on one site
"50-200 % conversion uplift range"	number	CRO	the only outcome claim, and unverifiable. Marko's own note: "the thing a sceptical DACH buyer tests you on". It's also a UWG §5 risk if targeted at Germany without substantiation
Systems strip (14 "delivered" + 3 "Ready to integrate (no delivered project yet)")	names	Complex EN/DE	honest split (Q-25), but no case backs the 14 publicly (only Fresh Market/POS, and Xentral per REQ-015). The "no delivered project yet" label on the page itself reads like a disclaimer in the hero zone

Not used to maximum effect:

1. The flagship case (UK gifting brand) isn't on the page as a case. It needs a short case block or a link from every page that cites it.
2. The App Store app should be the lead proof for the engineering claim, not a line in an FAQ answer.
3. There are no numbers on the cases a buyer can see (Prime EVA, Fresh Market). One number each (SKUs, locations, orders/day, hours saved, oversells avoided) would triple their weight.
4. There's no named DACH or EU reference on the DACH page. At minimum, say where Fresh Market operates.
5. Proof isn't tied to the position. Add a line such as "The hard part, in practice:" before the three cases on the home page.

7. Home page gap

How damaging it is: high. The home page is where referral and brand-name traffic land, and it's the source for `llms.txt`/AI summaries and the `Organization` JSON-LD context. It is also the only page that states origin. Today it sends a "Kyiv design studio for fashion brands, with React/Next.js and logo design" signal, followed by "we work within your budget" and "let's get down to business". A merchant with an ERP problem who arrives from a referral will judge the fit from the H1 ("Essential design & development") and leave before they reach the service pages that would have convinced them. A DACH buyer will read it as a low-cost generalist.

Minimum bridge changes, copy only, in existing components, before Marko's Home copy arrives (all marked **PROPOSAL**, to be replaced by Marko's copy):

- **H1** (replaces "Essential design & development"): **"Shopify for stores that need more than a theme"** Alternative: *"The Shopify team for the hard part of the build"*
- **Sub-line** (replaces "We help eCommerce brands scale..."): **"Configurators, B2B beside retail, ERP and POS that agree on every order, migrations off platforms nobody documented. One team designs it, builds it and stays on it after launch."**
- **Three pillars** (replace ecommerce / website & identity / Development and their tags):
 1. **Build:** "Shopify stores, themes and checkout logic designed and built by the same team." Tags: Shopify Development · Shopify Plus · Configurators · B2B · Web Design · CRO
 2. **Connect:** "Shopify in step with your ERP, POS, warehouse and couriers, plus the apps in between." Tags: ERP · POS · Middleware · Custom Apps · App Store
 3. **Move:** "Off Magento, WooCommerce or an in-house platform, with the data checked and the traffic kept." Tags: Magento · WooCommerce · Custom platforms · Redirects
- **About line** (replaces "We design, develop, and deliver innovation..."): **"We are Base X Tech, a Shopify engineering team of 20+ in Kyiv, one hour ahead of Berlin. We scope before we quote, we tell you when you**

don't need the expensive option, and we stay on what we build." (Check "20+" against the About copy.)

- **Portfolio:** swap bonkind for Prime EVA or the UK gifting brand, and make the "40+" count consistent with 100+.
- **Closing CTA:** replace "let's get down to business" with the Dev page's line: "Have a build that needs more than a theme?"
- **Meta description + `llms.txt` summary:** "Shopify development agency for stores that need more than a theme: custom builds, ERP/POS integrations, migrations and custom apps. Team in Kyiv, working with EU, UK and DACH merchants." (≤155 chars once trimmed.)
- **Title:** "Shopify Development & Web Design Agency" works as an interim SEO title. Brand-wise, "Shopify Development Agency for Complex Stores | Base X Tech" is closer to the position.

8. German page: does the brand survive translation?

The copy itself survives well. It uses formal "Sie" throughout, and the glossary follows how DACH ERP consultants talk ("führendes System", "Datenhoheit", "abgekündigt", "anbinden"). The translator avoided "gewährleistet/garantiert" and softened absolute claims. The register fits a Geschäftsführer or E-Commerce-Leiter reader.

Everything around the copy breaks the brand for a German buyer (/de/pages/complex-solutions/):

- Navigation, drawer, footer and form are **in English**: "Working Worldwide", "Discuss Your Project", "let's discuss a project", "What's your budget \$2k...", "thanks you for submitting the form", "All right reserved". The German CTA "Gespräch vereinbaren" opens an English form.
- Budgets are in **USD**, and there's no EUR anywhere.
- There's **no Impressum**. German B2B buyers look for it as a legitimacy check before anything else. For a site actively targeting German users it is widely treated as mandatory (§5 DDG), so have counsel confirm how it applies to a Ukrainian provider. It should carry the legal entity, address, managing director and registration/VAT ID.
- There's **no German Datenschutzerklärung**. The English privacy policy names Google Ads remarketing and Hotjar but no processor locations, and the Terms apply **Ukrainian law**.
- **Missing trust signals DACH buyers expect**, all to be stated only if true:
 - contracting entity and invoicing in EUR, with VAT reverse charge
 - DPA/AVV offered as standard
 - where middleware and data are hosted (EU region)
 - Shopify Partner status
 - project language (German with Alexander, English with engineers?)
 - a named DACH or EU reference (Fresh Market's location, or a German client quote)
 - response time / working hours in CET
- Blog cards link to English articles with no "(Englisch)" badge (Q-24).
- "Expertise vor Ort" is still live despite the translator's warning. Use "Ihr Ansprechpartner für die DACH-Region".
- "Private App" is outdated Shopify terminology, and technical German readers will notice (Q-24).
- H1/lead don't contain "Shopify" ("Komplexe Systeme, so verbunden, wie Ihr Unternehmen arbeitet."), so the page doesn't say which platform it is about until the systems strip.
- The strip's "Integrierbar (noch kein abgeschlossenes Projekt)" is honest, which is good for UWG, but it reads oddly as marketing. Consider moving it to an FAQ ("Und SAP Business One oder Salesforce?") with the same honest answer.

Top 8 recommendations, ranked by impact

#	Fix	Effort	Bridge / Redesign
1	Put the position on the home page and in <code>llms.txt</code> now. Replace H1, sub-line, three pillars (Build / Connect / Move), the "Kyiv" about line, the closing CTA and the meta description with the §7 proposals. Swap bonkind for Prime EVA or the UK gifting brand. Regenerate the <code>llms.txt</code> header from the new meta. Mark it all interim until Marko's Home copy arrives.	S	Bridge

#	Fix	Effort	Bridge / Redesign
2	Replace the shared "Approach" block on all 7 pages. Drop "we work within your budget" and "Immersion / Transparency / Quality". Put in the three principles the copy already proves, keeping the same people: "We scope before we quote" (Vadym-Marko), "We tell you when you don't need it" (Vadim), "We stay on what we build" (Sofia). One sentence each, taken from the FAQ answers. This one component edit removes most of the banned words on the site.	S	Bridge
3	Resolve Q-13: take the \$2200 "premium template... shipping setup for Ukraine" card off Shopify Development. Replace the pricing block with one line ("Most builds run 4–16 weeks; we scope and estimate before writing code"), or with a single "projects typically start from €X" if the owner wants a price anchor. Change the form budgets to EUR and a floor that matches the work. Change the form "Service required" options to the six services.	S	Bridge
4	Add a "Who does the work" trust block sitewide (footer band or pre-CTA section) and use it as the seed of the About page. It should cover: team in Kyiv (20+), one hour ahead of Berlin, working language English (German via Alexander for DACH), contracting entity and EUR invoicing, "you own the code and the repository", DPA on request, delivery continuity. Only verified facts; confirm every line with Alex. Fix the static "UTC: +2".	S (block) / M (About)	Bridge; About = bridge when copy lands
5	Make "complex" the brand spine, not a nav item. Rename "Complex Solutions" to "Shopify + ERP for DACH" (DE: "Shopify-ERP-Anbindung"). Put "Shopify" in its H1/lead. Cross-link it as the DACH face of Integrations. Rewrite the Karl block as a real person: city, background, what he does in <i>your</i> project, a quote in his own words without "seamlessly/our approach ensures". Change "Local Expertise / vor Ort" to "Your DACH contact / Ihr Ansprechpartner in DACH".	S–M	Bridge
6	Build the DACH trust layer before the DE page goes to prod. Impressum (entity, address, MD, registration/VAT), German privacy notice, German form/CTA/footer on /de/ (at least the drawer form and the success message), EUR, "(Englisch)" badges on blog cards, "Custom App" instead of "Private App", Fresh Market's location, and ideally one DACH/EU client quote. Review the governing-law choice for EU clients with counsel.	M	Bridge (legal pieces are prod blockers); full DE chrome = redesign
7	Rebuild proof around the position. (a) Link the UK gifting brand case study from every page that cites it, and give it a case block on Integrations/Migration. (b) Make Nova Poshta Connect lead proof on Apps and Integrations, with an App Store link and any verifiable rating/installs. (c) Add one number each to Prime EVA and Fresh Market. (d) Substantiate the CRO "50–200%" figure (which projects, what baseline) or replace it with a countable claim. (e) Rotate testimonials per page instead of the same three everywhere, and cite the source (Clutch/Upwork) on each.	M	Bridge for (a)(b)(d); redesign for full case pages
8	One name, one CTA, zero typos. Use "Base X Tech" in all text ("Base X" as the logo only). Remove "BaseX-Tech" from the meta. Use one primary button verb ("Discuss your project" / "Projekt besprechen") and keep the page-specific CTA body lines. Fix "Transparence", "Success Delivers", "Ecommerece", "thanks you for... We will back shortly to you", "All right reserved". Change the nav group labels "Ecommerce / Design" to the six service names (or Build / Connect / Move).	S	Bridge

Where the old visual identity conflicts with the message (for the redesign brief, not the bridge): the old template is portfolio- and display-type-led ("Foundations of Impactful Digital Experiences", "The Minds Behind Your Vision", big brand-identity imagery, a React/Next.js tag cloud). It signals a design studio. The new message is an engineering team that owns hard builds. In the Sanity redesign, give the architecture diagram, data-ownership decisions, a case with numbers and the App Store app the visual weight that portfolio thumbnails get today. Also design the "people who do the work" layer in from the start rather than as an Approach carousel.

Buyer walkthrough: four prospective clients on dev.base-xtech.com

Date: 2026-09-24 Method: I fetched every page listed in the brief with curl on 2026-09-24 and read the rendered text, including headings, FAQ questions, stage labels, card titles, the contact drawer and the footer. I also read the real blog (base-xtech.com/blog/) and the UK gifting case study. Each persona is a buyer with a real trigger who is comparing 3–4 agencies. Quotes are verbatim site text. Where I infer something (for example, where a button leads), I say so.

Scope note: the home page still carries the old copy and there is no About page yet. I only count those against the site where a persona actually gets sent there (for example the "Team" nav link).

Shared facts that shape every walkthrough

These are site-wide elements that every persona runs into:

Element	What the site actually shows
Location	"based in Kyiv, Ukraine" appears only on the old home page. No service page, the DE page or the footer mentions a country, legal entity, address or VAT ID.
Header	"UTC: +2" (Kyiv is on UTC+3 in September, so the one location hint is off by an hour).
Nav	"Case Studies" goes to <code>/blog/</code> . "Team" goes to <code>/#section-team</code> , where the home page says "20+ Designers, developers, and strategists" and shows one person (Vadym Yarmak, Lead designer).
People on service pages	Vadym-Marko Hruden "Head of Sales", Vadim Hula "Project Manager", Sofia Zabrodska "Business Development Manager". No engineer, tech lead or solution architect is shown anywhere.
Reviews on service pages	Three quotes, attributed to "VT Advantec", "Lili Mager" and "Gunia". There is no person name, role, country or link. The same three rotate across every page, with the tag relabelled ("Shopify Development" / "Custom APIs" / "Platform Integration"). The home page adds "Stealth Startup US", "Stealth Startup EU" and "Ecommerece Manager in Retail Company" (typo included).
Named work	Prime EVA (configurator, links out to primeeva.com rather than to a case study), Innan Jewellery, Gunia (Ukrainian homeware), Nova Poshta Connect (Ukrainian carrier app), Mo: Story Slider, Fresh Market (DE page). The flagship proof is always "UK gifting brand", which is unnamed.
Section after the FAQ on every EN page	"[H2] Approach / we work within your budget", followed by "Immersion — We're dedicated to crafting new solutions that push the boundaries of what's possible...". This is generic agency copy, and it sits directly after the most specific copy on the page.
"When We Can Help" cards (EN)	Headline only, with the body empty (e.g. "Stock is wrong by the time it syncs" followed by nothing). The DE page has the bodies.
Contact drawer	Required: name, email, phone , company (placeholder "e.g. Inditex"). "Service required" options: Shopify Development / Website Design / Custom Development / API Integration / Theme Store . There is no Migration, Apps, Integrations or CRO option. Budget in USD only : "\$2k / \$5k+ / \$10k+ / \$25k+". Success text: "thanks you for submitting the form / We will back shortly to you with response."
DE page chrome	Nav, drawer, form labels, success message and footer are all in English on <code>/de/</code> .
Legal	Footer has "Terms & Conditions" and "Privacy policy" only. There is no Impressum (<code>/de/pages/impressum/</code> returns 404). The privacy policy has no legal entity, no address, "By using our Website, you agree to the collection...", and lists Google Ads remarketing and Hotjar. Terms: "subject to the laws of Ukraine."

Persona 1: Katrin, Head of E-Commerce, German mid-size retailer

Profile: EUR 8–15M revenue, 3 stores plus Shopify, Xentral ERP. Stock mismatches between POS and online. Searched "Shopify Xentral Anbindung" and landed on `/de/pages/complex-solutions/`. She is also talking to two German

Shopify Plus partners and one Xentral-certified integrator.

First 10 seconds

- **H1:** "Komplexe Systeme, so verbunden, wie Ihr Unternehmen arbeitet." Then the system strip with **"Xentral"** second in the list.
- **What she gets:** these people connect Shopify to ERPs like mine. Xentral is named, along with JTL, weclapp, DATEV and Lexware. That is the DACH vocabulary, and it tells her the page was written for her. Good hook.
- **What she doesn't get:**
 - Who "wir" is.
 - Where they sit.
 - Whether Xentral is something they *have done* or only *could do*.
- The line "Integrierbar (noch kein abgeschlossenes Projekt): SAP Business One · Akeneo · Salesforce" is unusually honest. By contrast it implies Xentral **has** a delivered project. She registers that and wants to see it.

Section by section

Section	Question in her head	Answered?
System strip	"Have you actually done Xentral, and which direction? Stock from Xentral to Shopify, orders back?"	Implied, never shown. No Xentral case, no Xentral detail anywhere on the page.
"Expertise vor Ort", Alexander Karl, DACH-Partner	"Vor Ort. So there's someone in Germany I can meet? Who is he, is he employed or a reseller, where is he?"	No. The photo is a grey placeholder; its accessible label literally reads "Foto von Alexander Karl (Platzhalter)". No LinkedIn, no city, no email. The quote is generic ("nicht nur darum, APIs zu verbinden"). A named partner without a face reads worse than no partner at all.
"Unsere Leistungen" (ERP, CRM, APIs, private apps, automation, logistics)	"Fine, standard."	Yes, but it's undifferentiated.
"Unter der Haube / Was eine Integration zuverlässig macht" ("Feldzuordnung und Datenhoheit... Webhooks und API-Limits... Wiederholungsversuche, Datenabgleich und Monitoring")	"Do they know what they're doing technically?"	Yes, and this is the best block for her. It uses the words her IT lead would use.
"Systemarchitektur"	"Show me the diagram with Xentral, POS, Shopify."	Only a sentence of copy in text form. Whatever visual exists, it's generic, not her stack.
"Wann wir helfen können": "Ihre Systeme laufen auseinander... Inkonsistenzen, Verzögerungen und Handarbeit"	"That's me."	Yes, pain named exactly.
Fresh Market case	"Is this like us? Which POS, which ERP, how many locations, what sync interval, what was the oversell rate before and after?"	Partly. The problem is her problem ("ein im Laden verkaufter Artikel online weiterhin verfügbar"). But there are no numbers, no country, no systems named (is it Shopify POS? Xentral? neither?), no logo and no quote. "Key outcomes" are capability labels restated ("Bestandsabgleich: Die Verfügbarkeit bleibt... synchron"), not outcomes.
"Tiefer einsteigen" blog cards	"Anything about Xentral / German retail?"	No. The cards are a UK gifting brand, <i>Nova Poshta</i> ("Ukrainische Shopify-Shops mussten Nova-Poshta-Frachtbriefe..."), and an AI analytics agent built "mit der Claude-API". German titles link to English articles. Nova Poshta is the moment she realises this is a Ukrainian agency, and she learns it from a blog teaser, not from the company telling her.
Phase 1–4 ("System erfassen... Livegang & Monitoring")	"Fixed scope or T&M? What do I get at the end of phase 1: a Pflichtenheft/Lastenheft? Is phase 1 paid separately?"	No. The stages describe activities, not deliverables, duration or commercial model.

Section	Question in her head	Answered?
FAQ	"Wer betreut die Integration nach dem Livegang?" / "Wie verhindern Sie, dass Bestände auseinanderlaufen?"	Good answers. "Indem wir festlegen, welches System für den Bestand führend ist" is exactly the right answer. But: "Mit welchen ERP- und CRM-Systemen haben Sie bereits gearbeitet?" answers with "Mit ERP-, CRM-, PIM- und Fulfillment-Systemen aus den gängigen Kategorien". She asked <i>which</i> , and the answer dodges. After the logo strip, this reads as evasive.
Timeline FAQ	"How long for Xentral + POS?"	Only "Eine einzelne, gut dokumentierte Anbindung ist eine Frage von Wochen" and the UK case at "vier bis sechs Monate". No price anchor.

Pains named vs missed

- **Named:** inventory drift, manual re-keying, no fitting app, monitoring after go-live.
- **Missed (her real checklist):**
 - DSGVO / AVV (Auftragsverarbeitungsvertrag). Her customer and order data will pass through their middleware. Where is it hosted? EU?
 - Contract under German law, invoicing in EUR, a legal entity she can put in her vendor system.
 - Warranty and SLA (Reaktionszeiten, Wartungsvertrag).
 - Fixed-price option after discovery.
 - Xentral-specific depth: Xentral API limits, Lagerplätze, Chargen/MHD, multiple Lager ↔ Shopify Locations, returns.
 - Handling during the Christmas peak.
 - Business continuity for a team in Ukraine (she won't ask this out loud, but her CFO will).
 - A German-speaking contact on calls, not just on the page.

Trust and distrust

- **Trust:** the honest "noch kein abgeschlossenes Projekt" line; the DACH system list; "Datenhoheit" language; the FAQ on which system is authoritative.
- **Distrust, in order of damage:**
 1. **No Impressum.** For a German B2B buyer this is disqualifying on its own. It signals "not a real company in the German sense" and she will stop evaluating seriously.
 2. **Placeholder photo for the "Expertise vor Ort" partner.** "Vor Ort" promises local presence; the page can't show his face.
 3. **Everything around the German content is English:** nav, "let's discuss a project", and the success message "We will back shortly to you with response." The broken English in the success message is the last thing she sees, and it undermines the precision the page promised.
 4. Budget in \$, with a top bucket of "\$25k+" for a mid-size retailer whose project is likely EUR 30–80k.
 5. Ukraine is discovered indirectly (Nova Poshta), not stated. That feels like concealment, even though it isn't meant to be.
 6. Privacy policy: "By using our Website, you agree..." is not how consent works under DSGVO. There is no entity or address, and governing law is Ukraine.

Drop-off

She scrolls to Fresh Market, finds no numbers and no Xentral, clicks a blog card and lands on Nova Poshta or an English article. Then she looks for the Impressum in the footer to find out who they are, and it doesn't exist. **She drops off there.** If she is very pained, she might first open the drawer, see \$ and English, and close it.

Form?

No (maybe, if a colleague referred her). If she did write:

"Wir nutzen Xentral mit 3 Filialen (Shopify POS?) und Shopify online, ca. 40k SKUs. Bestände laufen auseinander. Haben Sie Xentral bereits angebunden? Bitte um Referenz und Angaben zu DSGVO/AVV, Vertragspartner und Festpreis für die Konzeptphase."

- **Annoying fields:**
 - Budget in USD with "\$25k+" as the ceiling.
 - Required phone. She would rather be emailed first.
 - "Service required" has no "ERP/POS integration" option. "API Integration" is the nearest.
 - The whole form is in English on a German page.

What she'd need to move forward

- An Impressum with a legal entity (ideally a German/EU contracting entity or a named German partner company).
- A named Xentral reference with numbers ("3 Filialen, Bestandsdifferenzen von X auf Y, Sync-Intervall Z Minuten").
- Alexander Karl with photo, LinkedIn and "spricht Deutsch, erreichbar unter...".
- One line on DSGVO/AVV and EU hosting.
- A paid discovery phase with a fixed price and a defined deliverable.
- A German form in EUR.

Versus a strong German competitor

A German Plus partner shows:

- Impressum and GmbH
- team photos in an office in Hamburg/Munich
- Xentral partner badge
- 3 named Mittelstand references with logos and a quote from a Geschäftsführer
- "Kostenloses Erstgespräch" via a calendar
- AVV template on request
- day rates or "Projekte ab 25.000 €"

Base X's copy is technically sharper than most of them, but it loses on every trust signal she actually checks.

Persona 2: Tom, founder, UK DTC brand (£2M)

Profile: Wants a custom product configurator plus B2B/wholesale on the same store. Was burned by a cheap freelancer (missed deadlines, spaghetti theme code, disappeared). Googled something like "Shopify product configurator agency UK" and landed on [/pages/shopify-development/](#).

First 10 seconds

- **H1:** "Shopify development for stores that need more than a theme." Sub: "Custom checkout, configurators, B2B and retail on one stack. If the build is the hard part, that's the work we take."
- **What he gets:** they do exactly my two things, and in one sentence. Strong hit. It's the best first screen he'll see among his four tabs.
- **What he doesn't get:** who they are, where they are, how big, and what it costs roughly.

Section by section

Section	Question in his head	Answered?
Capabilities ("Configurators — Product builders for options, variants and made-to-order ranges"; "B2B & Wholesale — Wholesale accounts, price lists and terms running beside your retail store")	"Good. Show me one."	Yes, as claims.
Stat: "100+ Projects delivered, for 60+ clients, with a 4.8 rating on Upwork."	"Upwork. That's where I found the freelancer who burned me."	Backfires for him. Upwork is the one proof point on the page, and for a founder burned by a cheap freelancer it signals the same marketplace tier. No Clutch score, no Shopify Partner tier.
Recent Projects: Prime EVA "Product configurator built directly into the native store front end"	"Let me see it working and read how it was built."	Half. The card links to primeeva.com. He can play with it, which is good, but there's no case study and no scope or timeline. He also has to guess where the configurator is on their site.
Innan Jewellery, Gunia	"Relevant?"	Not to configurator or B2B. Gunia is "a Ukrainian luxury homeware brand".
"When We Can Help": "One store must serve wholesale and retail", "Your product needs configuring to sell"	"Yes, that's me, tell me more."	Headline only, no body. It feels unfinished.
Reviews: "VT Advantec", "Lili Mager", "Gunia"	"Who are these? Can I call one?"	No. No names, no roles, no links. "Lili Mager" reads as a person, but the tag "Store Build" gives no context.
Stage 1–4 ("Scope & Estimate... Launch & Support")	"What happens in week 1? Do I pay for the scope? What if the estimate is wrong?"	Partly. "We work through what the build actually needs and what it will cost before anyone writes code" is the right promise for a burned buyer. But the "Stage 1 / Stage 2" labels read like a template, and there is no deliverable, duration or price per stage.
Pricing: "Quick Start from \$2200 / 3-5 weeks ... Payment and shipping setup for Ukraine "; "Shopify Turnkey from \$4500 / 4-8 weeks ... Seamless integration with business systems (CRM, ERP, etc.)"	"Wait."	This is where the page breaks for him. (1) "\$2200" and "\$4500" are freelancer-range prices. He was burned <i>by cheap</i> , and these price him straight back into that bracket. (2) "Payment and shipping setup for Ukraine" on an English page for a UK buyer shows the pricing was copied from another market's page. (3) "Seamless integration with... ERP" inside a \$4,500 package contradicts the page's own "We scope and estimate before writing code". (4) Nothing prices a configurator or B2B, which are the two things the H1 sells. (5) The tone shifts to generic agency copy ("Unique Shopify store that will leave competitors behind... maximum sales, customer loyalty and scaling"), unlike everything above it.
FAQ: "Can one store serve wholesale and retail?" and "We have built this, though that client's work is not public."	"So no proof."	Honest, but it's proof by assertion. Combined with the anonymous reviews, the one B2B claim has nothing behind it.
FAQ: "Do we need Shopify Plus?" and "we will say so rather than sell you the upgrade"	Is B2B on Plus only?	Good. Correct and trust-building. He learns B2B company accounts need Plus.
FAQ: "What happens after launch?" and "Handing over a login and disappearing is where most of the problems we get called in to fix started."	"That's literally my freelancer."	Strong. It names his pain exactly.
Approach: "we work within your budget" / "Immersion... push the boundaries of what's possible"	—	Boilerplate. Undoes the sharp tone.

Section	Question in his head	Answered?
Team shown: Head of Sales, PM, BDM	"Who writes the code? Is it one person?"	No. There's no developer face anywhere. Burned buyers want to meet the person who writes the code.

Pains named vs missed

- **Named:** checkout rules, wholesale and retail in one store, configurator, abandonment after launch, unnecessary rebuilds.
- **Missed:**
 - Code quality and ownership (his freelancer's theme was unmaintainable). The Apps page has "You do... including the repository", but this page doesn't.
 - How they communicate (weekly demo? Slack? UK-hours overlap?).
 - Staging and QA.
 - What happens if they are late.
 - Payment milestones.
 - The configurator's effect on page speed.
 - B2B specifics: net terms, per-customer catalogues, quick order, VAT for EU wholesale after Brexit.
 - UK references.

Trust and distrust

- **Trust:** the H1 and FAQ tone. It sounds like people who have done it, and it tells him when *not* to buy (headless, Plus, rebuild).
- **Distrust:**
 - "Ukraine" in the pricing card, discovered by accident.
 - Freelancer-tier prices.
 - Upwork as the headline proof.
 - Anonymous reviews.
 - No developer faces.
 - "Case Studies" in the nav goes to a blog whose H1 is "Shopify development, AI automation, and custom agentic tooling for e-commerce brands across Europe and the Asia-Pacific region". That's a third positioning after "stores that need more than a theme" on this page and "fashion, lifestyle, and digital retail" on the home page.
 - Clicking "Team" in the nav lands on the old home page, which shows "20+" and one designer.

Drop-off

At the pricing block. He reads "from \$2200 ... Ukraine", feels he's back in freelancer territory, and bounces to compare with a UK agency. If he survives that, he checks the UK gifting case study on the blog (it's genuinely strong) and returns.

Form?

Maybe (roughly 40%). If he submits:

"£2M DTC brand on Shopify (Basic/Advanced?). Need a product configurator (X options, conditional pricing) and B2B wholesale on the same store. Burned by a freelancer before — want to see who'd actually build it, a comparable configurator, and how you handle QA and handover. Timeline: before Q1."

- **Annoying fields:**
 - Budget: he doesn't know whether to pick "\$10k+" or "\$25k+", and picking low after seeing \$2,200 pricing feels like it will get him a junior.
 - "Service required" has no "Configurator" or "B2B" option.
 - Required phone: fine for him.

What he'd need

- A configurator case study with a before/after metric, the build time, and the stack (Liquid + app block? Checkout Extensibility? metaobjects?).
- One named B2B reference, even a short one.
- The name and face of the lead developer.
- A price anchor that matches the H1 ("Custom builds with configurator or B2B typically £15–40k").
- Payment milestones and code ownership.
- Remove the Ukraine line and the template package copy from the pricing card.

Versus a strong competitor

A good UK Shopify Plus agency shows:

- Shopify Plus Partner badge
- 5–8 named case studies with metrics
- founder and dev team photos
- "Projects typically start from £20k"
- a calendar booking

Base X's copy beats them for credibility of *thinking*. Its pricing card makes Base X look like a cheaper, riskier option than it actually is.

Persona 3: Marta, operations manager, EU brand migrating to Shopify

Profile: An EU brand on Magento 1 (EOL since 2020) with a WooCommerce satellite store. 10 years of customer and order data. Terrified of losing SEO rankings and orders during the switch. Landed on `/pages/service/shopify-migration-service/`.

First 10 seconds

- **H1:** "Shopify migration without losing what already works." Sub: "Magento, WooCommerce, BigCommerce or something built in-house. We move the store, the data and the traffic, then watch it settle."
- Stat: "1M+ Customer profiles migrated, 13 years of history moved".
- **What she gets:** this is about exactly my fear, and they've moved more history than I have. Strong. This is the best-matched landing of the four.
- **What she doesn't get:** who they are, whether "13 years of history" is one client or many (it's one, the UK gifting brand, and it's an in-house platform, not Magento), or the cost.

Section by section

Section	Question	Answered?
"Magento to Shopify — Magento 1 and 2 stores moved without carrying the maintenance bill over." / "WooCommerce to Shopify"	"You've done Magento 1 specifically?"	Claimed, with no M1 example. The named migrations are the UK gifting brand (custom platform), Prime EVA (platform not stated) and Gunia ("Replatformed", platform not stated).
"Keeping Traffic — Redirects, canonicals and hreflang set so rankings survive the switch."	"Hreflang. They know multi-language."	Yes. Hreflang is a strong signal for an EU multi-language brand.
Recent Projects: "UK gifting brand — Moved off a custom platform with 1M+ customer profiles intact."	"What happened to their traffic? Any numbers?"	No SEO outcome anywhere. The migration page's promise is "Migrations that keep the traffic", but there is no traffic figure for a single project. That's the one number she came for.
"When We Can Help": "Your platform is end of life"	"That's M1."	Headline only, no body.

Section	Question	Answered?
Stage 1–4, "Audit & Inventory... Launch & Watch" / "monitor Search Console for weeks after, not days"	"What do I get at the audit? A URL map spreadsheet? Is the audit paid? Can I stop after it?"	Best stage copy on the site , concrete and honest. Still missing: a deliverable, how long the audit takes, and whether it can be bought standalone.
FAQ "Will we lose our Google rankings?" and "Not if the redirects are done properly, and that is the part nobody quotes for."	—	Excellent. Names her fear and the competitor gap.
FAQ "What happens to our order history and customer accounts?" and "checked against the source rather than assumed"	"Passwords? Customers will have to reset. Loyalty points? Gift cards? Subscriptions? Reviews?"	Missing the #1 migration gotcha: customer passwords can't be migrated to Shopify, so customers need account activation emails. A migration buyer who has done her research asks this first, and its absence makes her wonder if they have. Also missing: gift cards, store credit, reviews, subscriptions, and GDPR consent flags on marketing subscribers.
FAQ "Can the store stay live during the migration?" and "a password-protected Shopify instance while your current one keeps selling"	Delta sync of orders placed during cutover?	Partly. There's no mention of a delta migration of orders placed between the data export and DNS switch, and that is her "losing orders" fear.
FAQ "What about our current integrations?" and "They get rebuilt, not carried over"	—	Honest, and it prepares her for the cost. Good.
Reviews: Gunia "I can recommend them both for store migration"	"One sentence, no name."	Weak.

Pains named vs missed

- **Named:** SEO loss, redirects, data integrity, custom platforms, integrations not transferring, live-during-migration, post-launch monitoring.
- **Missed:**
 - Customer password/account activation.
 - Delta sync at cutover.
 - Rollback plan ("what if we have to go back?").
 - Multi-store consolidation (M1 + Woo into one Shopify with Markets?).
 - EU-specific concerns: GDPR consent carry-over, VAT/OSS setup, EU payment methods (iDEAL, Klarna, SEPA), Shopify Markets for languages.
 - Cost range.
 - Data security during transfer: who holds the 10-year customer dump, where it's stored, and when it's deleted. As an ops manager at an EU brand she needs a DPA before handing over PII.

Trust and distrust

- **Trust:** the tone ("Migrations rarely fail on launch day. They fail three weeks later, when nobody is looking at the coverage report."). This is the sentence that makes her believe they've done it, and it's the best line on the site.
- **Distrust:**
 - The one big proof is anonymous, and it's not her platform.
 - No SEO numbers.
 - No mention of GDPR for the data she'd hand over.
 - The blog has a whole guide ("How to Migrate from Magento to Shopify: A Practical 2026 Guide") that **the migration page doesn't link to**. She'd find it only via "Case Studies" in the nav, which promises case studies and delivers a blog.

Drop-off

She doesn't drop off on the page itself; she's persuaded by the thinking. She stalls because there's nothing she can take to her boss: no case with numbers, no price range, no audit offer with a fixed price, and no company details for

procurement. She bookmarks it and moves on to an agency with a "Free migration audit" CTA.

Form?

Yes, likely (roughly 60%). This page converts best. She'd write:

"Magento 1.9 store (~8k SKUs, 180k customers, 10 years of orders) + WooCommerce store for [market]. Moving both to Shopify, 3 languages. Priority: keep rankings and order history, no downtime. Need a quote for audit + migration and info on how you handle customer data (GDPR/DPA)."

- **Annoying fields:**
 - "Service required" has **no "Migration" option** on the migration page. She'd pick "Shopify Development" and wonder whether it will reach the right person.
 - The budget ceiling "\$25k+" is too coarse, and it's in USD.

What she'd need

- A migration case with an SEO chart (traffic 90 days before and after) and the platform named.
- A fixed-price audit offer ("Migration audit: URL inventory, data map, risk list — €X, 2 weeks, credited to the project").
- An FAQ on passwords, delta sync and rollback.
- A link to the Magento guide.
- A company entity and a line on data processing.

Versus a strong competitor

Migration specialists (and Shopify's own migration partners) usually show:

- a checklist PDF
- SEO case charts
- "X migrations, Y% traffic retained on average"
- a fixed-price audit

Base X has the best *explanation*, and the least *evidence*.

Persona 4: Lukas, Swiss agency owner seeking a white-label Shopify app partner

Profile: Runs an 8-person design/Shopify agency in Zürich. Clients ask for custom apps and Functions that his team can't build. He needs a reliable subcontractor who will stay invisible to his clients, sign an NDA, and work to his PM process. Landed on `/pages/service/custom-shopify-app-development/`.

First 10 seconds

- **H1:** "Shopify apps built for the workflow you actually have." Sub: "Public apps, private apps and the automations... Two are live on the App Store."
- **What he gets:** real app builders, with public apps live.
- **What he doesn't get:** whether they work with agencies at all. The whole page speaks to merchants ("your team", "your process").

Section by section

Section	Question	Answered?
Capabilities: "Functions & Extensions", "App UX & Interface — App screens designed to match Polaris", "App Store Launch — Review submission, listing copy and the compliance work approval needs"	"Can they handle Functions, Checkout UI extensions, App Store review, GDPR webhooks, Built for Shopify?"	Mostly yes. Polaris and App Store compliance signal real experience. He'd want "Built for Shopify" and the stack (Remix/React Router, Node, which hosting).
Recent Projects: "Mo: Story Slider Navigation — Story-style navigation app built for a US agency partner , 5.0 rated."	"They do agency work!"	This is the only white-label signal on the whole site , and it's buried in a card caption. The FAQ calls it "built for a partner agency". No partner quote.
Nova Poshta Connect: "Carrier app for Ukrainian stores"	"Shows they can ship a public app."	Yes, and it's also how he learns they're Ukrainian.
"When We Can Help": "Someone on your team is the integration" / "You want to sell an app, not just use one"	"Where's 'you're an agency and need dev capacity'?"	Not there.
Stage 2: "with your team using it as it takes shape"	"Can they work in my Jira/Linear, under my brand, with my client never seeing them?"	No.
FAQ "Who owns the app and the code?" and "You do... including the repository"	Owner = my client or me? IP assignment through me?	Partial. It's written for merchants. It's reassuring, but he needs subcontracting terms.
FAQ "Can you take over an app someone else built?"	—	Good, and useful for agencies inheriting client messes.
FAQ "What happens when Shopify changes its API?" and "we would not claim to maintain an app we have never seen"	Maintenance retainer model for agencies?	Partly.
Pricing	Day rate? Hourly? Dedicated dev monthly?	Nothing. An agency owner has to know his margin before he picks up the phone.
Team	"Who will I work with? Their senior dev? English level?"	No devs shown. Sales, PM and BDM only.

Pains named vs missed

- **Named:** manual work, no fitting app, API deprecation, taking over code.
- **Missed (all of his):**
 - White-label / NDA.
 - Communicating directly with *his* client or only through him.
 - Rates and engagement models (T&M, fixed, dedicated developer).
 - Capacity and availability (can they start in 2 weeks?).
 - Timezone: CET overlap (they're UTC+2/+3, which is actually great, but it isn't said).
 - Code standards, tests, CI, handover docs.
 - Invoicing in CHF/EUR, VAT reverse charge.
 - Partner references.
 - Non-solicitation of his clients (critical for white-label; he fears the partner poaching his client).

Trust and distrust

- **Trust:**
 - Real public apps with ratings (he'll check the App Store listings).
 - "Mo" built for an agency.
 - Honest FAQ tone.
 - For him, **Ukraine is a positive:** it signals senior-dev value and CET-adjacent hours. The site should say it.
- **Distrust:**
 - No partner offering.
 - "100+ Projects... 4.8 rating on Upwork" (he wants partner proof, not a marketplace rating).

- Anonymous reviews.
- The only faces are sales.
- "Case Studies" leads to a blog.
- The home page he clicks through to ("Team") is old copy about "fashion, lifestyle, and digital retail".

Drop-off

He'll read the whole page, since it's short and relevant, then look for "Partners", "For agencies" or "White label" in the nav. It doesn't exist. He checks LinkedIn and Upwork via the footer icons, which takes him *off site* to where the credibility lives.

Form?

Maybe (roughly 50%). Agency owners are used to sending a cold "do you white-label?" email. He'd write:

"Swiss Shopify agency, 8 people. Looking for a white-label dev partner for custom apps / Functions / checkout extensions, ~2–4 projects per quarter. Need NDA, no direct client contact unless agreed, non-solicit, CET hours. Please send rates (day/hour) and an example of agency work."

- **Annoying fields:**
 - **Budget** makes no sense for a partnership. None of \$2k–\$25k+ fits "ongoing".
 - "Company: e.g. Inditex" is fine.
 - Required phone: he'd rather email.
 - "Service required": nothing fits ("Custom Development" is closest).

What he'd need

- A "For agencies" section or page with:
 - white-label and NDA
 - non-solicit
 - engagement models with rate ranges (EUR/h or EUR/day)
 - timezone and working hours
 - a stack list
 - a partner quote (the US agency behind Mo)
- The name, face and GitHub/LinkedIn of the senior app developer.

Versus a strong competitor

Eastern European dev shops that court agencies (Polish, Ukrainian, Baltic) usually have:

- a "White-label partnership" page
- a rate card
- a Clutch profile with agency reviews
- dev CVs on request
- "a trial task at a fixed price"

Base X actually has better evidence (live apps) than many of them, but hides the offer.

Cross-persona patterns

Scorecard

	Katrin (DE, ERP)	Tom (UK, config + B2B)	Marta (EU, migration)	Lukas (CH, white-label)
Landing page relevance	High (best-targeted)	High	Very high	Medium (merchant-framed)
Copy quality she/he perceives	High	High, until pricing	Very high	High
Proof she/he needs	Named Xentral/POS case with numbers	Configurator + B2B case, dev faces	SEO before/after, M1 case	Partner reference, rates
Proof on page	Fresh Market (no numbers)	Prime EVA link, "not public" B2B	Anonymous UK brand	"Mo" caption
Fatal blocker	No Impressum / placeholder partner / English form	"\$2200... Ukraine" pricing card	No evidence + no GDPR/DPA line	No partner offer / rates
Converts?	No	Maybe (~40%)	Yes-ish (~60%)	Maybe (~50%)

Top 10 gaps, ranked by breadth × severity

1. Every proof point is anonymous or thin (4/4 personas, severe).

- The flagship is "UK gifting brand". Reviews are "VT Advantec / Lili Mager / Gunia", with no person, role or link. The home page adds "Stealth Startup US" ×3. Fresh Market has no numbers. The FAQ says "that client's work is not public".
- Each buyer needs one piece of named, quantified evidence in *their* category, and none of the four gets it.
- **Fix (bridge: copy/structure now):**
 - Add a role and country to every review ("Operations Director, VT Advantec, Germany — client since 2021") and link to the Clutch/Upwork review source.
 - Put numbers into Fresh Market and the UK case, even ranges ("oversells: ~40/month → 0", "3 locations, sync < 60s", "1.1M profiles, 0 lost orders at cutover, organic traffic –3% for 2 weeks then +X%").
 - Ask the UK gifting brand for permission to name it, or at least use "UK personalised-gifts brand, £XM revenue".
- **Fix (redesign):** one case-study template per service with problem, systems, numbers and a quote, linked from the project cards (today Prime EVA links to the client's own site).

2. Who you are is hidden or contradictory (4/4, severe).

- Service pages never say Kyiv or Ukraine, which Katrin and Tom discover by accident (Nova Poshta, "setup for Ukraine").
- The only people shown are sales. There are no developers, no legal entity, "UTC: +2", and "Team" leads to an old page showing one designer against a "20+" claim.
- **Fix (bridge):**
 - Add one line under the stat block on every service page, stated as a strength: "Engineering team in Kyiv, working CET hours (UTC+3 / CET+1), serving clients in UK, DACH and EU since 2021."
 - Add the tech lead or senior dev to the "Approach" trio, replacing one sales face.
 - Fix the UTC label.
- **Fix (redesign):** build the About page with team photos by role, company entity, address, and a business-continuity statement (distributed team, backup power/connectivity). Point "Team" there.

3. The contact form doesn't fit these buyers (4/4, medium–severe).

- Service options exclude Migration, Apps, Integrations and CRO, and include "Theme Store".
- Budget is USD-only, with "\$25k+" as the ceiling, and makes no sense for a partner inquiry. Phone is required.
- The success message reads "thanks you for submitting the form / We will back shortly to you with response."
- The DE form is in English.
- **Fix (bridge):**
 - Pre-select the service from the page the drawer was opened on.
 - Options: Shopify build / Migration / Integrations & ERP / Custom app / Design / CRO / Agency partnership.

- Budget: "< €10k / €10–25k / €25–50k / €50k+ / Not sure yet", with currency following locale.
- Make phone optional.
- Rewrite success: "Thanks — we've got it. [Name] will reply within one working day."
- Localise the drawer on /de/.
- **Fix (redesign):** offer a calendar booking ("Book a call" currently opens the same form; I infer this from href="#").

4. Pricing block on Shopify Development contradicts the page (Tom directly; Katrin, Marta and Lukas indirectly by signalling tier) (severe for 1, medium for 3).

- "from \$2200... Payment and shipping setup for Ukraine" and "from \$4500... Seamless integration with business systems (CRM, ERP, etc.)" sit under an H1 about configurators, B2B and custom checkout. Meanwhile the page says "We scope and estimate before writing code".
- **Fix (bridge):**
 - Remove "for Ukraine".
 - Replace the two packages with a range table matching the H1: "Theme extension / feature work from €X", "Custom build with configurator or B2B typically €Y–Z", "Integration-heavy builds scoped after a paid discovery (€N, credited)".
 - Rewrite the package copy in the page's own voice. Drop "leave competitors behind" and "maximum sales".
- **Fix (redesign):** a consistent "How we price" pattern across services: paid discovery, then fixed-price phases.

5. Stage 1–4 describe activities, not deliverables, time or commercial model (4/4, medium).

- "Stage 1 Scope & Estimate" and "Phase 1 System erfassen" read like a template accordion. Every buyer asks: what do I get, how long does it take, do I pay separately, and can I stop there?
- **Fix (bridge):** add a one-line "You get:" per stage (e.g. "Stage 1 — 1–2 weeks — you get: system map, data-ownership table, risk list, fixed quote for stages 2–4. Paid, credited if you continue."). Replace the "Stage N" labels with week ranges.
- For Katrin this is the "Festpreis nach Konzeptphase" answer. For Marta it's the "migration audit" offer.

6. Germany/DACH trust basics are missing (Katrin fully; Lukas and Marta partly; severe for DACH).

- There is no Impressum (a legal requirement for German-facing commercial sites, and the first thing a German buyer checks). The privacy policy has no controller or address, "By using our Website, you agree...", and governing law is Ukraine.
- There is no DSGVO/AVV statement for client data passing through integrations and migrations.
- Alexander Karl has a placeholder photo under "Expertise vor Ort".
- **Fix (bridge):**
 - Publish an Impressum (EN "Legal notice" + DE), with the entity and address, and the DACH partner's entity if he contracts.
 - Add a FAQ to Integrations, Migration and DE Complex Solutions: "Wie gehen Sie mit personenbezogenen Daten um? — AVV nach Art. 28 DSGVO, Verarbeitung in der EU (Hosting: ...), Löschung nach Projektende."
 - Either show Karl's real photo with LinkedIn and a direct email, or remove the section until you can.
 - Change "vor Ort" to something true ("Ansprechpartner in der DACH-Region").
- **Fix (redesign):** a proper consent banner and privacy policy (Hotjar and Google Ads remarketing need opt-in consent in the EU).

7. FAQ misses the buyer's sharpest specific question (3/4, medium).

- **Katrin:** "Mit welchen ERP-Systemen haben Sie bereits gearbeitet?" is answered with "aus den gängigen Kategorien", right after a logo strip of named systems.
- **Marta:** nothing on customer passwords, account activation, delta sync at cutover, or rollback.
- **Tom:** nothing on code quality, communication cadence or payment milestones.
- **Fix (bridge):**
 - Name the systems in the ERP answer and say which have delivered projects (mirror the honest "noch kein abgeschlossenes Projekt" line).

- Add migration FAQs: "Will customers need new passwords?" (yes, Shopify can't import password hashes, so we send activation invites and here is the rollout plan); "What about orders placed during cutover?" (delta sync); "Can we roll back?".
- Add a Shopify Development FAQ: "How will we work together?" (weekly demo on staging, shared board, milestone payments, repo is yours).

8. "When We Can Help" cards are empty on the EN pages (4/4, low-medium, and cheap to fix).

- "Stock is wrong by the time it syncs", "One store must serve wholesale and retail" and "Your platform is end of life" each have no body text. It reads as unfinished, right at the "that's me" moment.
- **Fix (bridge):** add a two-line body to each, the way DE Complex Solutions already does ("Bestellungen, Bestände oder Kundendaten liegen in verschiedenen Systemen..."). The pattern already exists.

9. Credibility sources are off-brand for these buyers (3/4, medium).

- The headline stat everywhere is "4.8 rating on Upwork". For Tom (burned by a freelancer) and Lukas (wants a partner) that reads as marketplace-tier.
- Clutch is linked only on the old home page. There's no Shopify Partner status and no App Store ratings in the stat line.
- **Fix (bridge):**
 - Change the stat line to lead with the strongest signal per page. Apps: "2 public apps, 5.0 rated on the Shopify App Store". Migration: "1M+ profiles, 13 years of history". Integrations: "systems connected: Xentral, JTL, ...".
 - Show Clutch alongside Upwork.
 - Add Shopify Partner status if you have it.

10. No path for agency partners; "Case Studies" goes to a blog; the blog isn't linked from the service pages (Lukas fully, Marta and Tom partly; medium).

- The "Mo... built for a US agency partner" caption is the only partner signal.
- The nav promises "Case Studies" and delivers a blog whose H1 is a different positioning ("AI automation, and custom agentic tooling... Asia-Pacific").
- The migration page doesn't link the Magento/Woo migration guides.
- DE blog cards link to English articles, and a Nova Poshta teaser is shown to German buyers.
- **Fix (bridge):**
 - Rename the nav item to "Blog & case studies" or link it to `/blog/tag/case-study/`.
 - Add a "Go deeper" block to every service page with 2-3 relevant posts (Migration → Magento/Woo guides + UK case; Dev → Naya Tech configurator + INNAN).
 - On DE, replace Nova Poshta with a DACH-relevant piece or mark it "(Englisch)".
 - Add an FAQ to Apps: "Do you work with agencies?" (white-label, NDA, non-solicit, rates on request).
- **Fix (redesign):** an "For agencies" page with engagement models, rate ranges and a partner quote.

Also worth fixing (below top 10)

- The generic "Approach / we work within your budget / Immersion... push the boundaries" block after every FAQ undoes the sharp voice. Replace it with the team/people block or cut it.
- CRO: "50-200 % conversion uplift range" with no single case behind it reads as a made-up claim to any sceptical buyer. Either attach it to a named example or remove it.
- "Transparence" typo and "Ecommerece" on the home page (to fix when it's rebuilt).
- On the DE page the placeholder's accessibility label "(Platzhalter)" is read aloud to screen-reader users.

Verdict per persona

- **Katrin:** No. The German copy is the most precise she'll read, but there's no Impressum, the "vor Ort" partner has a placeholder photo, the form is English and in USD, and there's no Xentral reference. German competitors win on trust basics.

- **Tom:** Maybe. The H1 and FAQ speak to exactly his needs, but "\$2200... for Ukraine" pricing and anonymous proof put him back into the "cheap freelancer" bracket he's running from.
- **Marta:** Likely yes. The migration page names her fears better than any competitor, but she'll stall before signing without an SEO before/after, a fixed-price audit and a data-processing statement.
- **Lukas:** Maybe. The apps are real and "built for a US agency partner" is exactly his use case, but there's no white-label offer, no rates and no developer faces, so he'll email cold or move on.
